Section 1: Welcome to Your CRM

Congratulations! You now have access to the **M4E Customer Reactivation Manager** — a powerful tool built specifically for Nigerian businesses like yours. Whether you run a restaurant, a boutique, a salon, a logistics company, or a training academy, this CRM is designed to help you bring back old customers, keep current ones happy, and grow your revenue using WhatsApp, the app your customers already use every day.

What Does This CRM Do?

Think of the M4E Customer Reactivation Manager as your **digital sales assistant** that never sleeps. It keeps track of all your customers, remembers when they last bought from you, sends them messages at the right time, and helps you turn one-time buyers into loyal, repeat customers.

Here is the simple truth: **it costs 5 to 7 times more to find a new customer than to keep an existing one**. Most Nigerian businesses have hundreds or even thousands of past customers sitting in their phone contacts, WhatsApp chats, and exercise books — customers who bought once and never came back. This CRM helps you reach those customers and bring them back.

What You Want → How the CRM Helps

What You Want to Do	How the CRM Helps You
Bring back customers who stopped buying	Win-Back Campaign sends automatic messages to dormant customers with special offers

What You Want to Do	How the CRM Helps You
Remember customer birthdays	Birthday Campaign auto-sends personalized wishes and discounts on their special day
Stop losing online sales	Cart Abandonment Recovery reminds customers to complete their purchase
Know which customers spend the most	RFM Scoring automatically ranks customers by how recently, how often, and how much they buy
Send promotions to all customers at once	Broadcast feature lets you message hundreds or thousands of customers in one click
Get more Google reviews	Post-Purchase Follow-Up asks happy customers to leave reviews
Manage customer conversations	WhatsApp Inbox shows all customer chats in one place for your whole team
Track sales progress	Sales Pipeline gives you a visual board showing where each deal stands
Answer customer questions 24/7	AI Chatbot handles common questions even when you are sleeping
Know if customers are happy or unhappy	Sentiment Analysis reads message tone and alerts you to unhappy customers
Run holiday promotions	Seasonal Campaign templates for Eid, Christmas, Easter, Valentine's, and more
Grow through word-of-mouth	Referral Program turns happy customers into recruiters who bring new ones

How It Works

The CRM works through **three main channels**:

1. **WhatsApp** (Primary) — This is the main channel. Since over 90% of Nigerian smartphone users have WhatsApp, this is where your customers are. The CRM connects to your WhatsApp Business account and lets you send messages, run campaigns, and chat with customers — all from one dashboard.

2. **Email** (Secondary) — For customers who prefer email or for sending detailed information like receipts, reports, and newsletters. The CRM connects to your email through Brevo (a reliable email service).
3. **SMS** (Coming Soon) — For reaching customers who may not have internet access at the moment. This feature is being developed and will be available soon.

Meet the Businesses in This Guide

Throughout this guide, we will use five Nigerian businesses as examples. These are fictional businesses, but they represent real situations you might face:

Mama Nkechi's Kitchen — A popular restaurant in Surulere, Lagos. Mama Nkechi serves local dishes and has about 800 customers in her phone. She wants to send daily specials and bring back customers who haven't visited in months. She uses broadcasts for her daily menu and win-back campaigns for dormant customers.

Bella's Boutique — A fashion retail store in Lekki with an online Shopify store. Bella has 2,500 customers and loses sales when people add items to their cart but don't complete the purchase. She uses cart abandonment recovery and product catalog browsing to boost sales.

GlowUp Salon — A beauty salon with three branches in Lekki, Ikeja, and Abuja. GlowUp has 1,200 regular clients and wants to manage appointments, send birthday offers, and run a loyalty program. They use WhatsApp Flows for booking and birthday campaigns for engagement.

SwiftMove Logistics — A delivery and logistics company in Lagos with 3,000 business clients. SwiftMove needs to track delivery contracts through their pipeline and automate follow-ups. They use the sales pipeline and automations to manage their workflow.

TechHub Academy — A tech training school in Victoria Island with 600 students. TechHub wants to grow through student referrals and collect course feedback. They use the referral program and feedback collection campaigns.

You will see these businesses pop up throughout the guide with real examples of how they use each feature. Look for their names and you will find practical ideas you can copy for your own business.

Before You Start

To use the M4E Customer Reactivation Manager, you need:

- A computer, tablet, or smartphone with internet access
- A web browser (Chrome, Safari, Firefox, or Edge)
- A WhatsApp Business account (we help you set this up)
- Your customer data (phone numbers, names, purchase history — even if it is in an exercise book)
- An active M4E subscription (Starter, Professional, or Business plan)

That is it. No special software to install. No technical knowledge needed. If you can use WhatsApp and browse the internet, you can use this CRM.

Let us get started!

Section 2: Signing Up & Logging In

Creating Your Account (First Time)

If your M4E team has already created your account, skip to “Logging In” below. If you need to create a new account, follow these steps:

1. **Open your web browser** (Chrome is recommended) on your computer or phone
2. **Go to crm.marketing4effect.com**
3. You will see the **M4E login page** with the M4E logo at the top, a dark indigo background, and gold accent colors
4. Click the “**Sign Up**” or “**Create Account**” link below the login form
5. You will see a registration form. Fill in:
 - **Full Name** — Your name as you want it to appear (e.g., “Nkechi Okafor”)
 - **Email Address** — Use your business email if you have one (e.g., nkechi@mamankechiskitchen.com)
 - **Password** — Choose a strong password (at least 8 characters, mix of letters and numbers)
 - **Confirm Password** — Type the same password again
6. Click the “**Create Account**” button
7. **Check your email** — You will receive a verification email from M4E. Open it and click the “**Verify Email**” link
8. Once verified, you will be taken to your dashboard. Welcome!

Logging In (Returning Users)

1. **Go to** crm.marketing4effect.com
2. You will see the login page with two fields:
 - **Email** — Type the email you used to sign up
 - **Password** — Type your password
3. Click the **“Sign In”** button
4. You will be taken to your **Dashboard**

Forgot Your Password?

Don't worry — it happens to everyone! Here is how to reset it:

1. On the login page, click **“Forgot Password?”** (it is below the password field)
2. Enter your **email address** in the box that appears
3. Click **“Send Reset Link”**
4. **Check your email** (also check your spam/junk folder)
5. Click the **reset link** in the email
6. You will see a page where you can type a **new password**
7. Type your new password and confirm it
8. Click **“Reset Password”**
9. You will be redirected to the login page. Log in with your new password

Important: The reset link expires after 1 hour. If it has expired, just request a new one.

Mobile vs Desktop Access

The M4E CRM works on both your computer and your phone:

Feature	Desktop (Computer)	Mobile (Phone/ Tablet)
Full dashboard	Yes	Yes (scrollable)
WhatsApp inbox	Yes	Yes
Send broadcasts	Yes	Yes
Run campaigns	Yes	Yes
View reports	Yes	Yes
Manage contacts	Yes	Yes
Pipeline (drag & drop)	Best experience	Works but smaller
Settings	Yes	Yes

Our recommendation: Use your **computer** for setting up campaigns, importing contacts, and viewing reports. Use your **phone** for quick replies to customer messages and checking your dashboard on the go.

Pro Tip: Bookmark the CRM URL on your phone and computer. On your phone, you can even “Add to Home Screen” so it looks and feels like an app. In Chrome on Android: tap the three dots menu → “Add to Home screen”. In Safari on iPhone: tap the share button → “Add to Home Screen”.

Common Mistake: Using the wrong email address to log in. If you have multiple email addresses, make sure you are using the exact one you signed up with. Check for typos like “gmial.com” instead of “gmail.com”.

Staying Logged In

The CRM will keep you logged in for a reasonable period. However, for security:

- If you close your browser completely, you may need to log in again
- If you are inactive for a long time, you will be logged out automatically
- On shared computers (like a cyber café), always log out when you are done by clicking your profile icon in the top right and selecting “**Sign Out**”

Section 3: Your Dashboard — Understanding Your Numbers

When you log in, the first thing you see is your **Dashboard**. Think of it as the front page of a newspaper about your business — it shows you the most important numbers at a glance.

Dashboard Numbers Explained

At the top of your dashboard, you will see several cards showing key numbers:

Dashboard Card	What It Means	Example
Total Contacts	How many customers are in your CRM	“1,247 contacts” means you have 1,247 customer records

Dashboard Card	What It Means	Example
Active Contacts	Customers who have interacted recently (last 30 days)	“342 active” means 342 customers messaged or bought recently
Dormant Contacts	Customers who haven’t interacted in 60+ days	“589 dormant” means 589 customers need reactivation
Revenue Recovered	Money earned from customers the CRM helped bring back	“₦2,450,000” means your campaigns brought back ₦2.45M in sales
Messages Sent	Total messages sent this month (WhatsApp + Email)	“3,200 sent” means 3,200 messages went out this month
Open Rate	Percentage of messages that were read	“89%” means 89 out of 100 messages were opened
Response Rate	Percentage of messages that got a reply	“34%” means 34 out of 100 messages got a customer reply
Active Campaigns	Number of campaigns currently running	“3 active” means 3 campaigns are sending messages right now

Revenue Recovery Chart

Below the number cards, you will see a **Revenue Recovery Chart**. This is a bar chart or line graph that shows how much revenue your campaigns have recovered over time (weekly or monthly).

- **Green bars** = Revenue recovered that period
- **The trend line** = Shows if your recovery is going up or down over time
- You can hover over any bar to see the exact amount
- Use the date filter at the top right of the chart to change the time period (Last 7 days, Last 30 days, Last 90 days, This Year)

What good numbers look like: If your revenue recovery is trending upward month over month, your campaigns are working well. Even a small upward trend is good.

Contact Status Breakdown

You will also see a **pie chart** (or donut chart) showing how your contacts are distributed:

- **Active** — Customers who bought or interacted recently. These are your healthy relationships.
- **Warm Dormant** — Customers who haven't interacted in 30-60 days. They are starting to drift away.
- **Hot Dormant** — Customers who were very active but suddenly stopped. They need attention now.
- **Cold Dormant** — Customers who haven't interacted in 60+ days. They need a win-back campaign.
- **New** — Recently added contacts who haven't been categorized yet.

What to aim for: You want the green (Active) section to be the biggest. If the red (Cold Dormant) section is growing, it is time to run a win-back campaign.

Message Performance Metrics

The dashboard also shows your **message performance** for the current period:

Metric	Good	Warning	Needs Attention
Open Rate	80%+	60-80%	Below 60%
Response Rate	25%+	15-25%	Below 15%
Delivery Rate	95%+	90-95%	Below 90%
Opt-out Rate	Below 2%	2-5%	Above 5%

Pro Tip: Check your dashboard at least once a day, preferably in the morning. It takes less than 2 minutes and keeps you informed about your business health.

The Sidebar Menu

On the left side of your screen (or behind a menu icon on mobile), you will see the **sidebar menu**. This is how you navigate to different parts of the CRM:

Menu Item	What It Does	Icon
Dashboard	Takes you back to the main dashboard	Grid icon
Inbox	Opens your WhatsApp message inbox	Chat bubble
Contacts		People icon

Menu Item	What It Does	Icon
	View and manage all your customers	
Broadcasts	Send messages to many customers at once	 Megaphone icon
Campaigns	Create and manage automated campaigns	 Target icon
Pipeline	View your sales pipeline board	 Kanban icon
Products	Manage your product catalog	 Box icon
Automations	Set up automatic actions	 Lightning icon
AI Chatbot	Configure your AI assistant	 Robot icon
QR Codes	Create WhatsApp QR codes	 QR icon
Flows	Manage WhatsApp interactive forms	 Flow icon
Ad Leads	Track leads from ads	 Ad icon
Sentiment	View customer sentiment analysis	 Mood icon
Analytics	Detailed reports and charts	 Chart icon
Settings	Configure your account	 Gear icon
Help	Access help resources	 Question mark

Warning Signs on Your Dashboard

Pay attention to these warning signs:

- **Dormant contacts growing faster than active contacts** — You are losing customers. Run a win-back campaign immediately.
- **Open rate dropping below 60%** — Your messages may not be relevant. Review your message content and targeting.
- **Opt-out rate above 5%** — You may be sending too many messages or irrelevant content. Reduce frequency.
- **No campaigns running** — You are missing opportunities. At least one campaign should always be active.

- **Response rate below 15%** — Your messages are being read but not acted on. Improve your calls-to-action.
-

Section 4: Setting Up Your Account

Before you start using the CRM to its full potential, take a few minutes to set up your account properly. This is like setting up a new phone — do it once and everything works better.

Profile Setup

1. Click **Settings** in the sidebar menu (the gear icon )
2. You will see the **Profile** tab (it is usually the first tab)
3. Fill in or update these fields:

Field	What to Enter	Example
Business Name	Your official business name	"Mama Nkechi's Kitchen"
Contact Email	Email for notifications	"nkechi@mamankechiskitchen.com"
Phone Number	Your business phone	" +234 801 234 5678"
Currency	Your currency (default is NGN)	"NGN (₦)"
Timezone	Your timezone	"Africa/Lagos (WAT)"
Business Category	What type of business you run	"Restaurant & Food Service"
Address	Your business address	"15 Adeniran Ogunsanya St, Surulere, Lagos"

1. Click **"Save Changes"** at the bottom

WhatsApp Connection Status

This is the most important setup step. Your CRM needs to be connected to your WhatsApp Business account to send and receive messages.

1. Go to **Settings** → **WhatsApp** tab
2. You will see your **connection status**:
 - **Connected** — Everything is working. You can send and receive messages.
 - **Pending** — Connection is being set up. Wait a few minutes.
 - **Disconnected** — There is a problem. Contact M4E support.
3. If you see your WhatsApp Business phone number displayed, you are connected
4. You can also see your **message quota** (how many messages you can send per day)

Important: Do NOT disconnect your WhatsApp connection unless M4E support tells you to. Disconnecting will stop all message sending and receiving.

Email Configuration

1. Go to **Settings** → **Email** tab
2. Your email is configured through **Brevo** (our email delivery partner)
3. You will see:
 - **Sender Name** — The name that appears when you send emails (e.g., “Mama Nkechi’s Kitchen”)
 - **Sender Email** — The email address emails come from
 - **Daily Limit** — How many emails you can send per day (depends on your plan)
 - **Connection Status** — Should show Connected

First Things to Do After Login

Here is your priority checklist for your first session:

1. **Complete your profile** — Fill in all the fields in Settings → Profile
2. **Check WhatsApp connection** — Make sure it shows Connected
3. **Import your contacts** — Add your customer data (see Section 6)
4. **Set up your tags** — Create tags to organize customers (see Section 6)
5. **Send a test message** — Send a WhatsApp message to yourself or a team member to make sure everything works

6. **Explore the dashboard** — Click around and get familiar with the layout
7. **Set up your first campaign** — Start with the Win-Back Dormant Customers campaign (see Section 11)

Pro Tip: Don't try to set up everything in one day. Focus on importing your contacts and sending your first campaign. You can explore other features over the next few days.

Common Mistake: Skipping the contact import step. The CRM is only as powerful as the data you put into it. Even if you only have 50 customer phone numbers, import them. You can always add more later.

Section 5: Your WhatsApp Inbox

The WhatsApp Inbox is where you read and reply to all customer messages. Think of it as WhatsApp on your computer, but with superpowers — you can see customer details, assign conversations to team members, use quick replies, and more.

Opening the Inbox

1. Click **Inbox** in the sidebar menu (the chat bubble icon )
2. You will see a screen split into two parts:
 - **Left side:** A list of all conversations, with the most recent at the top
 - **Right side:** The selected conversation's messages

Each conversation in the list shows: - The **customer's name** (or phone number if no name is saved) - A **preview** of the last message - The **time** of the last message - A **badge** showing unread message count (if any) - A **label** showing the conversation status (Open, Pending, Resolved, Spam)

Reading Messages

1. Click on any conversation in the left panel
2. The full conversation history appears on the right
3. You will see:
 - **Customer messages** on the left side (with a light background)
 - **Your replies** on the right side (with a colored background)
 - **Timestamps** below each message
 - **Message status icons** next to your sent messages

Message Status Icons

Icon	Meaning	What It Looks Like
	Message is being sent	A small clock icon
 Single grey tick	Message sent to WhatsApp servers	One grey checkmark
 Double grey ticks	Message delivered to customer's phone	Two grey checkmarks
 Double blue ticks	Message read by customer	Two blue checkmarks
	Message failed to send	A red error icon

Pro Tip: If you see a failed icon, don't panic. It usually means the customer's phone was off or they have no internet. The message will often deliver later. If it keeps failing, check if the phone number is correct.

Replying to Messages

You have several ways to reply:

Text Reply: 1. Click in the **message input box** at the bottom of the conversation 2. Type your message 3. Press **Enter** or click the **Send** button (arrow icon)

Send an Image: 1. Click the **attachment icon** () next to the message input box 2. Select **"Image"** 3. Choose an image from your computer or phone 4. Add a caption if you want (optional) 5. Click **Send**

Send a Document: 1. Click the **attachment icon** () 2. Select **"Document"** 3. Choose a file (PDF, Word, Excel, etc.) 4. Click **Send**

Send a Voice Note: 1. Click and hold the **microphone icon** next to the send button 2. Speak your message 3. Release to send (or slide left to cancel)

👍 🍕 🍌 🍷 🍹 🍺 🍻

Reactions

You can react to customer messages with emojis: 1. Hover over (or long-press on mobile) a customer's message 2. Click the **emoji icon** that appears 3. Select a reaction () 4. The reaction appears below the message

Quick Replies

Quick replies are pre-written messages you can send with one click. They save you time when you answer the same questions repeatedly.

1. Click the **quick reply icon** () in the message input area
2. You will see a list of your saved quick replies
3. Click one to insert it into the message box
4. Edit it if needed, then send

Examples of useful quick replies: - “Thank you for your message! We will get back to you within 30 minutes.” - “Our business hours are Monday to Friday, 9am to 6pm. We will respond when we open.” - “Here is our price list: [link]” - “Your order has been confirmed! Expected delivery: [date]”

Template Picker

For sending the first message to a customer (or re-opening a conversation after 24 hours), you need to use an **approved WhatsApp template**:

1. Click the **template icon** () in the message input area
2. Browse or search your approved templates
3. Select a template
4. Fill in any variable fields (like customer name or order number)
5. Click **Send**

Important: WhatsApp requires you to use approved templates when starting a new conversation or replying after 24 hours of inactivity. This is a WhatsApp rule, not an M4E rule. See Appendix L for more about templates.

Conversation Labels

Every conversation has a label that shows its status:

Label	Color	Meaning	When to Use
Open	Green	Active conversation needing attention	New messages that need a reply
Pending	Yellow	Waiting for something (customer reply, info, etc.)	You replied and are waiting for the customer

Label	Color	Meaning	When to Use
Resolved	Grey	Conversation is complete	Issue solved, question answered, sale made
Spam	Red	Unwanted or irrelevant messages	Spam, wrong numbers, or irrelevant messages

To change a conversation's label: 1. Open the conversation 2. Click the **label dropdown** at the top of the conversation 3. Select the new label

Assigning Conversations to Team Members

If you have a team (Professional or Business plan), you can assign conversations to specific team members:

1. Open the conversation
2. Click the **"Assign"** button at the top
3. Select a team member from the dropdown
4. The team member will be notified and the conversation will appear in their assigned list

This is useful when: - A customer asks a technical question that only one team member can answer - You want to distribute workload evenly among your team - A specific team member has a relationship with that customer

Tips for Managing Your Inbox

1. **Reply quickly** — Customers expect fast replies on WhatsApp. Aim for under 30 minutes during business hours.
2. **Use labels consistently** — Mark conversations as Resolved when they are done. This keeps your inbox clean.
3. **Use quick replies** — Set up quick replies for your most common questions. It saves hours every week.
4. **Check unread messages first** — The inbox shows unread count badges. Start with those.
5. **Don't leave customers hanging** — If you cannot solve their issue immediately, send a quick "We are looking into this and will get back to you within [time]" message.

Example: Mama Nkechi Managing Lunch Orders

Every morning, Mama Nkechi opens her CRM inbox on her phone. She sees 15 new messages from customers ordering lunch. Here is how she handles them:

1. She opens each conversation and reads the order
2. For standard orders, she uses her **quick reply**: “Thank you for your order! Your food will be ready by [time]. Total: ₦[amount]. Please confirm.”
3. For special requests, she types a custom reply
4. She marks confirmed orders as **Pending** (waiting for pickup/delivery)
5. After the customer picks up or receives delivery, she marks the conversation as **Resolved**
6. At the end of the day, she has a clean inbox with zero unread messages

This process takes her about 20 minutes in the morning instead of the 2 hours she used to spend scrolling through WhatsApp on her phone.

Pro Tip: If you get a lot of messages, use the **search bar** at the top of the inbox to find specific conversations. You can search by customer name, phone number, or message content.

Common Mistake: Ignoring the “Resolved” label. If you never mark conversations as resolved, your inbox will be cluttered with old conversations and you will miss new ones.

Section 6: Managing Your Contacts

Your contacts are the heart of your CRM. Every customer, every lead, every person who has ever bought from you or shown interest in your business — they all live here. The better you organize your contacts, the more money you will make.

What Are Contacts?

A **contact** is any person whose information is stored in your CRM. Each contact has:

- **Name** — Their full name
- **Phone Number** — Their WhatsApp number (this is the most important field)
- **Email** — Their email address (optional but useful)
- **Tags** — Labels you assign to organize them (e.g., “VIP”, “Lekki Branch”, “Bought Ankara”)

- **Recency Status** — How recently they interacted with your business (Active, Warm Dormant, Hot Dormant, Cold Dormant)
- **RFM Score** — A number showing how valuable they are (see Section 7)
- **Purchase History** — What they bought, when, and how much they spent
- **Conversation History** — All WhatsApp and email messages exchanged
- **Custom Fields** — Any extra information you want to track (e.g., birthday, dress size, preferred cuisine)
- **Branch** — Which branch they belong to (if you have multiple locations)
- **Sentiment** — Whether their recent messages are positive, neutral, or negative

Viewing and Searching Contacts

1. Click **Contacts** in the sidebar menu (the people icon )
2. You will see a **table** listing all your contacts with columns for Name, Phone, Tags, Status, Last Activity, and RFM Score
3. To **search** for a specific contact:
 - Click the **search bar** at the top
 - Type the person's name, phone number, or email
 - Results appear as you type
4. To **sort** the list:
 - Click any **column header** (e.g., click "Last Activity" to sort by most recent)
 - Click again to reverse the sort order

Filtering Contacts

Filtering helps you find specific groups of customers. Click the **Filter** button (funnel icon) to see filter options:

Filter By	What It Does	Example
Tag	Show only contacts with a specific tag	Filter by "VIP" to see only VIP customers
Status	Show contacts by recency status	Filter by "Cold Dormant" to see who needs reactivation
Branch	Show contacts from a specific branch	Filter by "Lekki" to see only Lekki branch customers
Sentiment	Show contacts by sentiment	Filter by "Negative" to see unhappy customers

Filter By	What It Does	Example
Date Added	Show contacts added in a date range	Filter by “Last 30 days” to see new contacts
Last Activity	Show contacts by last interaction date	Filter by “More than 60 days ago” to find dormant customers
RFM Score	Show contacts by score range	Filter by “Score 8-10” to see your best customers

You can combine multiple filters. For example: Tag = “VIP” AND Status = “Cold Dormant” will show you VIP customers who have gone quiet — these are the ones you definitely want to reach out to.

Adding One Contact Manually

1. Click the “+ **Add Contact**” button (usually at the top right of the Contacts page)
2. A form will appear. Fill in:
 - **First Name** (required) — e.g., “Chioma”
 - **Last Name** — e.g., “Adeyemi”
 - **Phone Number** (required) — e.g., “+234 802 345 6789” (must include country code)
 - **Email** — e.g., “chioma@email.com”
 - **Tags** — Click to add tags like “New Customer”, “Lekki Branch”
 - **Branch** — Select the branch (if applicable)
 - **Notes** — Any additional information
3. Click “**Save Contact**”
4. The contact now appears in your list and you can start messaging them

Pro Tip: Always include the country code (+234 for Nigeria) when adding phone numbers. The CRM needs this to send WhatsApp messages correctly.

Importing Contacts via CSV (Bulk Import)

If you have many customers to add (from a spreadsheet, exercise book, or another system), you can import them all at once using a CSV file.

What is a CSV file? It is a simple spreadsheet file that programs like Excel, Google Sheets, and Numbers can create. CSV stands for “Comma-Separated Values.”

Step-by-step import process:

1. **Prepare your spreadsheet** in Excel or Google Sheets with these columns:
 - Column A: **first_name** (e.g., "Chioma")
 - Column B: **last_name** (e.g., "Adeyemi")
 - Column C: **phone** (e.g., "+2348023456789" — no spaces, include +234)
 - Column D: **email** (e.g., "chioma@email.com")
 - Column E: **tags** (e.g., "VIP, Lekki" — separate multiple tags with commas)
 - Column F: **birthday** (e.g., "1990-03-15" — use YYYY-MM-DD format)
 - Column G: **total_spent** (e.g., "150000" — just the number, no ₦ symbol)
 - Column H: **last_purchase_date** (e.g., "2026-01-15")
2. **Save as CSV:** In Excel, go to File → Save As → choose "CSV (Comma delimited)" as the file type. In Google Sheets, go to File → Download → Comma-separated values (.csv)
3. **In the CRM,** go to **Contacts** → click "**Import**" button
4. **Upload your file:** Click "Choose File" or drag and drop your CSV file
5. **Map your columns:** The CRM will show you a preview of your data and ask you to match each column to the correct field:
 - Column A → First Name
 - Column B → Last Name
 - Column C → Phone
 - And so on...
6. **Review the preview:** Check that the data looks correct. The CRM will show you the first few rows.
7. **Handle duplicates:** Choose what to do if a phone number already exists:
 - **Skip** — Don't import the duplicate (recommended)
 - **Update** — Overwrite existing data with new data
 - **Create new** — Create a separate contact (not recommended)
8. Click "**Start Import**"
9. **Wait for completion:** The CRM will process your file. For large files (1,000+ contacts), this may take a few minutes. You will see a progress bar.

10. **Review results:** After import, you will see a summary:

- Contacts imported successfully
- Contacts skipped (duplicates)
- Contacts with errors (invalid phone numbers, etc.)

Common Mistakes with CSV Import:

- **Wrong phone format:** Phone numbers must start with +234 (or your country code). “08023456789” will not work — use “+2348023456789”
- **Extra spaces:** Make sure there are no extra spaces before or after phone numbers
- **Wrong date format:** Use YYYY-MM-DD (e.g., 2026-03-15), not DD/MM/YYYY
- **Special characters in names:** Avoid using commas in names (since CSV uses commas as separators). “Nkechi, Mrs” should be just “Nkechi”
- **File too large:** If your file has more than 10,000 rows, split it into smaller files

See **Appendix G** for a detailed import walkthrough with screenshots.

Automatic Import from Shopify/WooCommerce

If you have an online store on Shopify or WooCommerce (Professional or Business plan), your customers are imported automatically:

- When someone places an order on your online store, they are automatically added as a contact in the CRM
- Their purchase history is synced automatically
- Cart abandonment is tracked (they added items but did not complete the purchase)
- You do not need to do anything — it just works once connected

See **Section 14** for how to connect your e-commerce store.

Understanding Tags

Tags are labels you attach to contacts to organize them. Think of tags like sticky notes on a customer’s file. You can add as many tags as you want to any contact.

Tag Category	Example Tags	Purpose
Customer Type	VIP, Regular, New, Walk-in, Online	Identify customer value level
Product Interest	Ankara, Ready-to-wear, Accessories, Bridal	Know what they like
Location	Lekki, Ikeja, Abuja, Surulere	Know where they are

Tag Category	Example Tags	Purpose
Source	Instagram, Referral, Walk-in, Google, Ad Lead	Know how they found you
Behavior	Frequent Buyer, One-time, Complainer, Promoter	Know their patterns
Campaign	Win-back-June, Birthday-2026, Xmas-Promo	Track campaign participation
Service	Haircut, Braids, Nails, Facial, Full-Package	Know what services they use
Dietary	Vegetarian, No-Pork, Spicy-Lover, Allergies	Know food preferences

How to add tags to a contact: 1. Open the contact's profile (click their name in the contacts list) 2. Find the **Tags** section 3. Click "+ Add Tag" 4. Type the tag name or select from existing tags 5. Press Enter or click the tag to add it

How to create new tags: 1. Go to **Settings** → **Tags** tab 2. Click "+ New Tag" 3. Enter the tag name and optionally choose a color 4. Click **Save**

Understanding Recency Status

The CRM automatically categorizes your contacts based on how recently they interacted with your business:

Status	What It Means	Time Since Last Activity	What to Do
• Active	Customer is engaged and buying	Less than 30 days	Keep them happy! Send VIP offers, ask for referrals
• Warm Dormant	Customer is starting to drift away	30-60 days	Send a friendly check-in message or a small incentive
Hot Dormant	Previously very active customer who	Varies (AI-detected)	Urgent! These are your best customers going quiet.

Status	What It Means	Time Since Last Activity	What to Do
Cold Dormant	suddenly stopped	60+ days	Reach out personally
	Customer has been inactive for a long time		Run a win-back campaign with a strong offer
New	Recently added, not yet categorized	Just imported	Send a welcome message and start building the relationship

The system updates these statuses automatically based on customer activity. You do not need to manually change them.

Pro Tip: The recency thresholds (30 days, 60 days, etc.) can be customized in Settings → Recency Settings. Different industries have different cycles. A restaurant might set “dormant” at 14 days, while a furniture store might set it at 90 days.

Segments

Segments are **saved filters** that automatically group contacts based on rules you define. Unlike tags (which you manually assign), segments update automatically.

Examples of useful segments: - “VIP customers who haven’t bought in 30 days” (Tag = VIP AND Last Activity > 30 days ago) - “Lekki branch customers interested in braids” (Branch = Lekki AND Tag = Braids) - “High-value dormant customers” (RFM Score > 7 AND Status = Cold Dormant) - “New customers from Instagram ads” (Source = Ad Lead AND Date Added = Last 7 days)

Segments are powerful because you can use them as audiences for broadcasts and campaigns. Instead of manually selecting who to message, you just pick a segment and the CRM automatically includes the right people.

Custom Fields

Custom fields let you store extra information about your contacts that the default fields do not cover.

How to create a custom field: 1. Go to **Settings → Custom Fields** tab 2. Click “+ New Field” 3. Enter: - **Field Name** — e.g., “Dress Size”, “Preferred Cuisine”, “Company Name” - **Field Type** — Text, Number, Date, Dropdown, or Checkbox - **Options** (for Dropdown) — e.g., “Small, Medium, Large, XL, XXL” 4. Click **Save**

The new field will now appear on every contact’s profile for you to fill in.

Example: Bella’s Boutique Organizing Customers by Style Preference

Bella runs a fashion boutique and wants to send targeted promotions. Here is how she organizes her 2,500 customers:

1. **Tags she created:** “Ankara-Lover”, “Corporate-Wear”, “Casual”, “Bridal”, “Plus-Size”, “Petite”, “Budget-Friendly”, “Premium”
2. **Custom fields she added:** “Dress Size” (dropdown: S, M, L, XL, XXL), “Style Preference” (dropdown: Traditional, Western, Fusion), “Last Purchase Amount” (number)
3. **Segments she set up:**
 - “Ankara lovers who haven’t bought in 60 days” — for win-back campaigns
 - “Premium customers with high RFM scores” — for VIP exclusive offers
 - “Plus-size customers” — for new plus-size collection announcements

When Bella gets a new Ankara collection, she sends a broadcast only to the “Ankara-Lover” tagged customers. When she launches a plus-size line, she targets the “Plus-Size” segment. This means customers only get messages about things they actually care about — which means higher response rates and more sales.

Common Mistake: Not using tags at all. If all your contacts are in one big unsorted list, you cannot target your messages effectively. Even 3-5 basic tags (like “VIP”, “New”, “Lekki”, “Ikeja”) make a huge difference.

Section 7: Understanding Customer Scores (RFM)

What Is RFM?

RFM stands for **Recency, Frequency, Monetary**. It is a scoring system that tells you how valuable each customer is to your business. The CRM calculates this score automatically — you do not need to do any math.

Think of it like a school report card for your customers:

- **R = Recency** — How recently did they buy? (A customer who bought yesterday is more valuable than one who bought 6 months ago)
- **F = Frequency** — How often do they buy? (A customer who buys every week is more valuable than one who bought once)
- **M = Monetary** — How much do they spend? (A customer who spends ₦500,000 is more valuable than one who spends ₦5,000)

How Each Score Works

Each factor (R, F, and M) is scored from **1 to 5**:

Recency Score (R): | Score | Meaning | Example | |—|—|—| | 5 | Bought very recently (last 7 days) | Chioma bought jollof rice yesterday | | 4 | Bought recently (8-30 days ago) | Emeka bought a shirt 2 weeks ago | | 3 | Bought somewhat recently (31-60 days ago) | Fatima visited the salon 6 weeks ago | | 2 | Haven't bought in a while (61-120 days ago) | Tunde last ordered 3 months ago | | 1 | Haven't bought in a long time (120+ days ago) | Blessing last visited over 4 months ago |

Frequency Score (F): | Score | Meaning | Example | |—|—|—| | 5 | Buys very often (10+ times) | Chioma orders lunch 3 times a week | | 4 | Buys often (6-9 times) | Emeka buys clothes every month | | 3 | Buys sometimes (3-5 times) | Fatima visits the salon quarterly | | 2 | Bought a few times (2 times) | Tunde has ordered twice | | 1 | Bought only once | Blessing came once and never returned |

Monetary Score (M): | Score | Meaning | Example | |—|—|—| | 5 | Spends a lot (top 20% of customers) | Chioma has spent ₦450,000 total | | 4 | Spends above average | Emeka has spent ₦200,000 total | | 3 | Spends average | Fatima has spent ₦80,000 total | | 2 | Spends below average | Tunde has spent ₦25,000 total | | 1 | Spends very little | Blessing spent ₦3,000 once |

What the Combined Score Tells You

The three scores are combined into an **overall RFM score** from 3 (lowest: 1+1+1) to 15 (highest: 5+5+5). Here is what different score ranges mean:

RFM Score Range	Customer Type	What It Means	What to Do
13-15	Champions	Your best customers. They buy often, recently, and spend a lot.	Reward them! VIP offers, early access, referral requests
10-12	Loyal Customers	Great customers who buy regularly	Keep them engaged with exclusive content and offers
7-9	Potential Loyalists	Good customers who could become great	Nurture them with personalized recommendations
5-6	New or Average	New customers or occasional buyers	Welcome sequences, product education, gentle nudges
3-4	At Risk / Lost	Customers who rarely buy or have stopped	Win-back campaigns with strong incentives

How to Use RFM Scores for Targeting

RFM scores make your marketing much smarter:

1. **VIP Campaigns** → Target customers with RFM score 13-15
2. **Win-Back Campaigns** → Target customers with RFM score 3-6
3. **Referral Requests** → Ask customers with RFM score 10+ (they love you enough to recommend you)
4. **Upsell Campaigns** → Target customers with high Frequency but low Monetary (they buy often but spend little — show them premium options)
5. **Re-engagement** → Target customers with high Monetary but low Recency (they used to spend big but stopped — find out why)

Example: GlowUp Salon Identifying VIP Clients

GlowUp Salon has 1,200 clients. Using RFM scores, they discovered:

- **47 Champions** (RFM 13-15): These clients visit every 2 weeks, spend ₦30,000+ per visit, and have been coming for over a year. GlowUp sends them exclusive early access to new treatments and birthday packages worth ₦50,000.
- **156 Loyal Customers** (RFM 10-12): These clients visit monthly and spend ₦15,000-₦30,000. GlowUp sends them loyalty rewards and seasonal promotions.
- **312 At Risk** (RFM 3-4): These clients visited once or twice months ago and never came back. GlowUp runs a win-back campaign offering 30% off their next visit.

The result? In the first month, GlowUp recovered 89 of the 312 at-risk clients (a 28.5% win-back rate), generating ₦1,335,000 in recovered revenue.

Pro Tip: You do not need to understand the math behind RFM scoring. The CRM calculates everything automatically based on your customer data. Just focus on using the scores to target the right customers with the right messages.

Common Mistake: Treating all customers the same. A customer with an RFM score of 15 should get very different treatment than one with a score of 3. Use the scores!

Section 8: Your Sales Pipeline

What Are Pipelines?

A **pipeline** is a visual way to track deals, orders, or customer journeys as they move through different stages. Think of it like a board game — each customer (or deal) is a card that moves from left to right as they progress.

If you have ever used a physical board with sticky notes arranged in columns (like “To Do”, “In Progress”, “Done”), that is exactly what a pipeline looks like — but digital and much more powerful.

How It Looks

When you click **Pipeline** in the sidebar, you will see a **kanban board** — a screen divided into vertical columns, each representing a stage. Each column contains **cards** representing individual deals or customers.

You can **drag and drop** cards from one column to the next as deals progress.

Default Pipeline Stages

The CRM comes with a default reactivation pipeline with these stages:

Stage	Column Position	What It Means	Example
Data Import	1st (leftmost)	Customer data has been imported but not yet processed	500 contacts just imported from CSV
Segmentation	2nd	Customers have been categorized by tags, RFM, and status	Contacts sorted into VIP, Dormant, New groups
Campaign Active	3rd	A reactivation campaign is running for these customers	Win-back messages being sent to 200 dormant customers
Follow-up	4th	Customers responded and need personal follow-up	45 customers replied to the win-back message
Won Back	5th	Customer has been successfully reactivated (made a purchase)	28 customers made a new purchase
Lost	6th (rightmost)	Customer did not respond to any reactivation attempts	172 customers did not respond after 3 attempts

You can customize these stages or create entirely new pipelines for different purposes.

Managing Deals

Moving a deal to the next stage: 1. Find the deal card in the current column 2. Click and hold the card 3. Drag it to the next column 4. Release (drop) it

The card will now appear in the new column, and the move is recorded with a timestamp.

Viewing deal details: 1. Click on any deal card 2. A detail panel opens showing: - Contact information - Deal value (₦ amount) - Current stage - Stage history (when it moved through each stage) - Notes and activities - Associated messages

Adding Deals Manually

1. Click the “+ Add Deal” button at the top of the pipeline
2. Fill in:
 - **Deal Name** — e.g., “Chioma Adeyemi - Catering Order”
 - **Contact** — Select the contact from your list
 - **Value** — The deal amount in Naira (e.g., ₦150,000)
 - **Stage** — Which stage to place it in (usually the first stage)
 - **Notes** — Any relevant details
3. Click “Create Deal”
4. The deal card appears in the selected stage column

Pipeline Analytics

At the top of the pipeline page, you will see summary numbers:

Metric	What It Shows
Total Deals	How many deals are in the pipeline
Total Value	Combined value of all deals (₦)
Won Deals	Number of deals in the “Won Back” stage
Won Value	Total value of won deals (₦)
Conversion Rate	Percentage of deals that reached “Won Back”
Average Deal Value	Average ₦ value per deal
Average Time to Close	How long it takes a deal to go from first stage to “Won Back”

Example: SwiftMove Logistics Tracking Delivery Contracts

SwiftMove Logistics uses a custom pipeline to track their B2B delivery contracts:

Their custom stages: 1. **Inquiry** — A business contacted them about delivery services 2. **Quote Sent** — SwiftMove sent a price quote 3. **Negotiation** — The client is negotiating terms 4. **Contract Signed** — Deal is confirmed 5. **Active Delivery** — Deliveries are in progress 6. **Completed** — All deliveries fulfilled 7. **Lost** — Client chose a competitor

SwiftMove has 45 active deals in their pipeline worth a total of ₦12,500,000. Their dashboard shows: - 12 deals in “Inquiry” stage - 8 deals in “Quote Sent” - 6 deals in “Negotiation” - 10 deals in “Contract Signed” - 7 deals in “Active Delivery” - 2 deals in “Completed” this month

By looking at the pipeline, SwiftMove’s sales manager can instantly see where deals are stuck. If too many deals are sitting in “Quote Sent” without moving to “Negotiation”, it means their quotes might be too high or they are not following up quickly enough.

Pro Tip: Review your pipeline at least once a week. Look for deals that have been stuck in the same stage for too long. These need attention — either a follow-up message, a phone call, or a decision to move them to “Lost” so you can focus on active opportunities.

Common Mistake: Creating too many pipeline stages. Keep it simple — 5 to 7 stages is ideal. Too many stages make the board confusing and hard to manage.

Section 9: Your Product Catalog

Why Add Products?

Adding your products to the CRM gives you several advantages:

- **Link products to purchases** — When a customer buys something, you can record exactly what they bought. This helps the CRM calculate accurate RFM scores and recommend products.
- **Product suggestions** — The CRM can suggest products to customers based on what they (or similar customers) have bought before.

- **Catalog browsing** — On the Business plan, customers can browse your products directly inside WhatsApp (see Campaign Template #12).
- **Better campaigns** — When you know what products a customer likes, you can send them targeted promotions instead of generic ones.

Adding a Product

1. Click **Products** in the sidebar menu (the box icon )
2. Click the “+ Add Product” button
3. Fill in the product details:

Field	Required?	What to Enter	Example
Product Name	 Yes	The name of the product or service	“Ankara Maxi Dress”
Description	 Yes 	A short description (2-3 sentences)	“Beautiful floor-length Ankara dress with puff sleeves. Available in 5 vibrant prints.”
Price	Yes	The selling price in Naira	₦25,000
Category	Yes	The product category	“Dresses”
Image	Recommended	A clear photo of the product	Upload a JPG or PNG image
SKU	Optional	Your internal product code	“ANK-MAXI-001”
Stock Quantity	Optional	How many you have in stock	50
Cost Price	Optional	What it costs you (for profit tracking)	₦12,000

1. Click “**Save Product**”

AI Ghost Text for Descriptions

Not sure what to write for the product description? The CRM has an **AI writing assistant** built in:

1. Type the product name
2. Click the “ **AI Suggest**” button next to the description field
3. The AI will generate a professional product description based on the name and category
4. Edit the suggestion to match your style and add any specific details
5. Click **Save**

This is especially useful if you have many products to add and do not want to write descriptions for each one from scratch.

Linking Products to Purchases

When you record a customer’s purchase, you can link it to specific products:

1. Open the customer’s contact profile
2. Go to the **Purchases** tab
3. Click “**+ Add Purchase**”
4. Select the product(s) from your catalog
5. Enter the quantity and any discount applied
6. The total is calculated automatically
7. Click **Save**

This purchase is now linked to both the customer and the product, which helps with: - Accurate RFM scoring - Product recommendation - Purchase history tracking - Revenue reporting

Product Suggestions

The CRM can suggest products to customers based on their purchase history and what similar customers have bought. This works like the “Customers who bought this also bought...” feature on Amazon.

When you are chatting with a customer in the inbox, you may see a “**Suggested Products**” panel showing products that customer might be interested in. You can then share these suggestions directly in the chat.

Example: Bella’s Boutique Catalog

Bella added all 150 products from her boutique to the CRM catalog. Here is how she organized them:

Categories: - Ankara Dresses (35 products) - Ready-to-Wear (28 products) - Corporate Wear (22 products) - Accessories (30 products) - Bridal Collection (15 products) - Plus Size (20 products)

Now when a customer messages asking about Ankara dresses, Bella can: 1. See the customer's purchase history ("She bought 2 Ankara dresses before") 2. See product suggestions ("Customers who bought those dresses also liked these accessories") 3. Share product images and prices directly in the WhatsApp chat 4. On the Business plan, send an interactive catalog the customer can browse inside WhatsApp

This turned Bella's WhatsApp from a simple chat into a full shopping experience.

Pro Tip: Take good photos of your products. A clear, well-lit photo can increase customer interest by 3x compared to a blurry or dark image. Use natural light and a clean background.

Common Mistake: Not keeping product prices updated. If your prices change, update them in the catalog immediately. Sending a customer an old price and then telling them it has increased is a sure way to lose a sale.

Section 10: Sending Broadcasts

What Are Broadcasts?

A **broadcast** is a message you send to many customers at once. Think of it like a group message, but each customer receives it as a private, individual message — they do not see other recipients and they do not know it was sent to many people.

Broadcasts are perfect for: - Announcing a flash sale or promotion - Sending holiday greetings (Christmas, Eid, Easter, etc.) - Sharing daily specials (for restaurants) - Announcing new product arrivals - Sharing important business updates (new location, changed hours, etc.) - Inviting customers to events

Broadcast vs Campaign — What Is the Difference?

Feature	Broadcast	Campaign
What it is	A single message sent to many people	A series of automated messages over time

Feature	Broadcast	Campaign
Number of messages	1 message	Multiple messages (2-5 typically)
Timing	Sent once (now or scheduled)	Sent automatically over days/weeks
Automation	Manual — you decide when to send	Automatic — the system sends based on triggers
Best for	Announcements, flash sales, updates	Win-back sequences, follow-ups, nurture flows
Effort	Low — write one message and send	Medium — set up once, runs automatically
Example	"Flash sale! 30% off all items today only!"	Day 1: "We miss you!" → Day 3: "Here's 20% off" → Day 5: "Last chance!"

Simple rule: Use **broadcasts** for one-time announcements. Use **campaigns** for automated sequences that nurture customers over time.

The 4-Step Broadcast Process

Step 1: Choose Your Channel

1. Click **Broadcasts** in the sidebar menu (the megaphone icon)
2. Click **" + New Broadcast "**
3. Choose your channel:
 - **WhatsApp** — Best for most messages. 90%+ open rate in Nigeria.
 - **Email** — Good for longer content, newsletters, or formal communications.
 - **SMS** — Coming soon. Will be good for reaching customers without internet.

For most Nigerian businesses, **WhatsApp is the best choice**. It has the highest open rates and response rates.

Step 2: Write Your Message (or Select a Template)

You have two options:

Option A: Select a pre-approved template 1. Click “**Choose Template**” 2. Browse your approved WhatsApp templates 3. Select one and fill in the variable fields (like customer name, offer details, etc.)

Option B: Write a custom message 1. Type your message in the message box 2. You can add: - **Text** — Your main message - **Image** — A product photo, flyer, or promotional image - **Document** — A PDF menu, price list, or catalog - **Video** — A short promotional video - **Buttons** — Call-to-action buttons (“Shop Now”, “Call Us”, “Visit Website”)

Important: For WhatsApp broadcasts, you must use an **approved template** if you are messaging customers who have not chatted with you in the last 24 hours. This is a WhatsApp rule. See Appendix L for details on templates.

Tips for writing great broadcast messages: - Keep it short (under 160 words for WhatsApp) - Start with something attention-grabbing - Include a clear call-to-action (“Reply YES to order”, “Click here to shop”) - Add urgency when appropriate (“Today only!”, “First 50 customers”) - Personalize with the customer’s name: “Hi {first_name}!” - Use emojis sparingly but effectively

Step 3: Choose Your Audience

Who should receive this broadcast? You have several options:

Audience Option	What It Does	Best For
All Contacts	Sends to everyone in your CRM	Major announcements, holiday greetings
By Tag	Sends only to contacts with specific tags	Targeted promotions (e.g., only “Ankara-Lover” tagged customers)
By Status	Sends to contacts with a specific recency status	Win-back messages to “Cold Dormant” customers
By Branch	Sends to contacts from a specific branch	Branch-specific promotions
By Segment	Sends to a saved segment	Complex targeting (e.g., “VIP customers in Lekki who like braids”)
By RFM Score	Sends to contacts within a score range	VIP offers to high-scoring customers

Audience Option	What It Does	Best For
Custom Selection	Manually select individual contacts	Personal messages to specific people

You can combine multiple filters. For example: Tag = “VIP” AND Branch = “Lekki” AND Status = “Active” will send only to active VIP customers at your Lekki branch.

Step 4: Schedule or Send Now

You have two options:

- **Send Now** — The broadcast goes out immediately
- **Schedule** — Choose a specific date and time for the broadcast to be sent

If you choose to schedule: 1. Click “**Schedule**” instead of “Send Now” 2. Select the **date** from the calendar 3. Select the **time** (in WAT — West Africa Time) 4. Click “**Schedule Broadcast**” 5. The broadcast will appear in your scheduled list and will be sent automatically at the chosen time

Checking Broadcast Results

After your broadcast is sent, you can check how it performed:

1. Go to **Broadcasts** in the sidebar
2. Find your broadcast in the list
3. Click on it to see the results:

Metric	What It Means	Good Result
Sent	Number of messages sent	Should match your audience size
Delivered	Number of messages that reached the customer’s phone	95%+ is good
Read	Number of messages that were opened and read	80%+ for WhatsApp
Replied	Number of customers who replied	15%+ is good
Failed	Number of messages that could not be delivered	Below 5% is acceptable
Opted Out		Below 2% is healthy

Metric	What It Means	Good Result
	Number of customers who asked to stop receiving messages	

Best Times to Send Broadcasts in Nigeria

Based on data from Nigerian businesses, here are the best times to send WhatsApp broadcasts:

Day	Best Time	Why
Monday	10:00 AM - 12:00 PM	People are settling into the week, checking phones
Tuesday	10:00 AM - 12:00 PM	Mid-morning is peak engagement
Wednesday	10:00 AM - 1:00 PM	Midweek, people are receptive
Thursday	10:00 AM - 12:00 PM	Good engagement before weekend planning
Friday	9:00 AM - 11:00 AM	Send early — people get distracted by weekend plans
Saturday	9:00 AM - 11:00 AM	Good for retail and lifestyle businesses
Sunday	Avoid if possible	Lowest engagement day

Times to avoid: - Before 8:00 AM (people are getting ready for work/school) - After 9:00 PM (people are winding down, may find it intrusive) - During major events (elections, big football matches, etc.)

Tips for Better Broadcasts

1. **Do not send too often** — 2-3 broadcasts per week maximum. More than that and customers will opt out.
2. **Always provide value** — Every broadcast should offer something useful: a discount, information, entertainment, or a solution to a problem.
3. **Segment your audience** — Do not send the same message to everyone. A VIP customer should get different treatment than a new customer.

4. **Test before sending** — Send the broadcast to yourself or a team member first to check for typos and formatting.
5. **Track your results** — Check the metrics after every broadcast. If open rates are dropping, change your approach.
6. **Respect opt-outs** — If a customer asks to stop receiving messages, the CRM automatically removes them. Never manually add them back.
7. **Use images wisely** — A good image can double your response rate, but a blurry or irrelevant image can hurt it.

Example: Mama Nkechi's Daily Specials Broadcast

Every morning at 9:00 AM, Mama Nkechi sends a broadcast to her “Lunch Regulars” tagged customers:

Her process: 1. She takes a photo of today's special dish 2. Opens the CRM on her phone 3. Goes to Broadcasts → New Broadcast 4. Selects WhatsApp as the channel 5. Writes her message:

“Good morning {first_name}!

Today's Special at Mama Nkechi's Kitchen:

Ofada Rice with Ayamase Sauce — ₦2,500
Peppered Chicken — ₦1,500 **Fresh Zobo** — ₦500

15 Adeniran Ogunsanya St, Surulere Ready from
12:00 PM

Reply LUNCH to pre-order and skip the queue! ”

1. Attaches the photo of today's Ofada Rice
2. Selects audience: Tag = “Lunch Regulars” (about 200 customers)
3. Clicks **Send Now**

Results: On average, 85% of recipients read the message, 25% reply to pre-order, and Mama Nkechi makes an extra ₦75,000-₦120,000 per day from broadcast-driven orders alone.

Pro Tip: Schedule your regular broadcasts in advance. Mama Nkechi could prepare a week's worth of broadcasts on Sunday evening and schedule them for each morning. This saves time during the busy morning rush.

Common Mistake: Sending broadcasts without a clear call-to-action. “We have new items” is weak. “Reply ORDER to get 20% off our new items — today only!” is strong. Always tell the customer exactly what to do next.

Section 11: Running Campaigns — Your Money-Making Machine

What Are Campaigns?

If broadcasts are like shouting an announcement in a market, **campaigns are like having a dedicated sales team** that follows up with each customer personally, automatically, over several days.

A campaign is a **series of automated messages** sent to specific customers based on rules you set. Once you launch a campaign, it runs on its own — sending the right message to the right customer at the right time — while you focus on running your business.

For example, a Win-Back Campaign might work like this: - **Day 1**: “Hi Chioma! We haven’t seen you in a while. We miss you! Here’s what’s new...” - **Day 3**: “Chioma, we have a special 20% discount just for you. Valid this week only!” - **Day 5**: “Last chance, Chioma! Your 20% discount expires tomorrow. Don’t miss out!”

All three messages are sent automatically. You set it up once and the CRM does the rest.

Campaign Gallery

When you click **Campaigns** in the sidebar, you will see the **Campaign Gallery** — a visual display of all available campaign templates. Each template is shown as a card with:

- **Campaign name** and icon
- **Category badge** (Reactivation, Engagement, Retention, Growth, Recovery)
- **Tier badge** (Tier 1, Tier 2, or Tier 3) — indicating which subscription plans include it
- **Brief description** of what the campaign does
- **Expected results** (e.g., “15-25% win-back rate”)

You can filter campaigns by category or tier using the filter buttons at the top of the gallery.

The 6-Step Campaign Launch Process

Launching a campaign follows these six steps:

Step 1: Analyze The CRM analyzes your customer data and shows you: - How many customers qualify for this campaign - Their breakdown by status (Active, Dormant, etc.) - Estimated reach and potential revenue - Recommended timing

Step 2: Template Choose a campaign template from the gallery (see the 14 templates below) or customize an existing one.

Step 3: Audience Select who should receive the campaign: - All qualifying contacts - Filtered by tags, status, branch, or RFM score - A specific saved segment

Step 4: Customize Personalize the campaign messages: - Edit the message text - Change the timing between messages - Adjust the offer or discount amount - Add your business-specific details - Upload images or attachments

Step 5: Schedule Choose when to start the campaign: - Start immediately - Schedule for a specific date and time - Set the campaign duration (how long it should run)

Step 6: Review & Launch Review all settings one final time: - Preview each message in the sequence - Confirm the audience size - Check the schedule - Click **“Launch Campaign”**

All 14 Campaign Templates Explained

The M4E CRM comes with **14 pre-built campaign templates** organized into three tiers. Here is everything you need to know about each one:

Campaign 1: Win Back Dormant Customers

Tier: Tier 1 (Available on all plans) | **Category:** Reactivation

What it does: This is the flagship campaign of the CRM. It automatically reaches out to customers who have stopped buying from you (inactive for 60+ days) and tries to bring them back with a sequence of increasingly attractive offers.

How it works: The campaign sends 3 messages over 5 days:

Message	When	What It Says	Purpose
Message 1	Day 1	“We miss you! Here’s what’s new...”	Reconnect and remind them you exist
Message 2	Day 3	“Special offer just for you: [X]% off”	Give them a reason to come back

Message	When	What It Says	Purpose
Message 3	Day 5	"Last chance! Offer expires tomorrow"	Create urgency to act now

Who should use it: Any business with customers who have stopped buying. If you have been in business for more than 6 months, you almost certainly have dormant customers.

Expected results: 15-25% win-back rate. That means if you send this campaign to 200 dormant customers, you can expect 30-50 of them to make a purchase.

Example message (Message 1): > "Hi {first_name}! > > It's been a while since we saw you at Mama Nkechi's Kitchen, and we've missed you! > > We've added some exciting new dishes to our menu: > Seafood Okra with Fresh Prawns > Special Banga Soup > Grilled Catfish Pepper Soup > > We'd love to welcome you back. Reply MENU to see our full menu!"

Example: Mama Nkechi Winning Back Old Regulars

Mama Nkechi had 350 customers who hadn't ordered in over 60 days. She launched the Win-Back Campaign with a 15% discount offer. Here is what happened:

- **Message 1** (Day 1): 350 sent, 298 read (85% open rate), 42 replied
- **Message 2** (Day 3): 308 sent (excluded those who already bought), 267 read, 35 replied with orders
- **Message 3** (Day 5): 273 sent, 231 read, 18 replied with orders

Total result: 95 customers came back (27% win-back rate), generating ₦712,500 in recovered revenue in just 5 days. The campaign cost her nothing except the discount — which she was happy to give because those customers would have been lost forever otherwise.

Campaign 2: Birthday & Anniversary Messages

Tier: Tier 1 (Available on all plans) | **Category:** Engagement

What it does: Automatically sends personalized birthday wishes with exclusive discounts to customers on their special day. Nothing makes a customer feel valued like being remembered on their birthday.

How it works: The CRM checks customer birthdays daily and automatically sends a birthday message with a special offer. You set it up once and it runs forever.

Timing	What Happens
On their birthday (morning)	Birthday wish + exclusive discount code sent via WhatsApp
3 days after birthday	Reminder if they haven't used the discount yet

Who should use it: Any business that collects customer birth dates. If you do not currently collect birthdays, start now — add a “Birthday” custom field and ask customers when they visit.

Expected results: Birthday messages have a **481% higher purchase rate** than regular promotional messages. Customers who receive birthday offers spend an average of 25% more than their usual purchase.

Example message: > “ Happy Birthday, {first_name}! > > Everyone at GlowUp Salon wishes you a wonderful birthday! > > As our gift to you, enjoy **25% OFF** any treatment this week. > > Use code: BDAY{first_name} > Valid until {expiry_date} > > Book now: Reply BOOK or call us at 0801-234-5678 > > Have an amazing day! ”

Example: GlowUp Salon Birthday Packages

GlowUp Salon collected birthdays from 800 of their 1,200 clients. They set up the Birthday Campaign with a 25% discount on any treatment. In the first 3 months:

- 67 birthday messages were sent
- 48 customers booked appointments (72% conversion rate!)
- Average spend per birthday visit: ₦22,500 (vs normal average of ₦15,000)
- Total birthday revenue: ₦1,080,000
- Many birthday customers brought friends along, generating additional revenue

The salon now considers the Birthday Campaign their highest-ROI marketing activity.

Pro Tip: Collect birthdays from every customer. Add it to your intake form, ask during checkout, or run a “Tell us your birthday for a special surprise!” campaign. The more birthdays you have, the more revenue this campaign generates.

Campaign 3: Post-Purchase Follow-Up

Tier: Tier 1 (Available on all plans) | **Category:** Retention

What it does: After a customer makes a purchase, this campaign automatically follows up to thank them, check if they are satisfied, and ask for a review. It turns one-time buyers into repeat customers and generates social proof for your business.

How it works: A 3-message sequence triggered after each purchase:

Message	When	What It Says	Purpose
Thank You	1 day after purchase	“Thank you for your purchase! How was your experience?”	Show appreciation, open feedback channel
Check-in	7 days after purchase	“Hi! How are you enjoying [product]? Any questions?”	Ensure satisfaction, catch problems early
Review Request	14 days after purchase	“Would you mind leaving us a review? It helps other customers.”	Generate social proof

Who should use it: Every business. Period. Following up after a purchase is one of the simplest and most effective ways to build customer loyalty.

Expected results: 92% open rate, 35% reply rate, 28% leave a review or make a repeat purchase.

Example message (Thank You — Day 1): > “Hi {first_name}! > > Thank you for your order from Bella’s Boutique! We hope you love your new {product_name}. > > If you have any questions about styling or care instructions, just reply to this message — we’re here to help! > > Enjoy your new look! ”

Smart feature: The review request (Message 3) uses **satisfaction gating**. If the customer indicated they were unhappy in Message 1 or 2, the system does NOT ask for a review. Instead, it routes them to customer service for resolution. This prevents negative reviews and shows customers you care about fixing problems.

Campaign 4: VIP Exclusive Offers

Tier: Tier 1 (Available on all plans) | **Category:** Growth

What it does: Identifies your top 20% of customers (by spending) and sends them exclusive offers, early access to new products, and VIP treatment. This keeps your best customers happy and spending.

How it works: The CRM uses RFM scores to identify your Champions and Loyal Customers (RFM score 10+). These VIP customers receive:

Message	What It Offers
VIP Welcome	"You're one of our top customers! Here's your VIP status..."
Exclusive Offer	Early access to sales, exclusive discounts, or free gifts
VIP Check-in	Personal message asking for feedback and preferences

Who should use it: Any business that wants to retain their highest-value customers. Remember the 80/20 rule: 20% of your customers typically generate 80% of your revenue. Losing even one VIP customer can significantly impact your bottom line.

Expected results: 20% increase in VIP customer spending, 25-40% reduction in VIP customer churn.

Example message: > "Hi {first_name}! > > We wanted to personally thank you for being one of our most valued customers at SwiftMove Logistics. > > As a VIP client, you now get: > Priority delivery scheduling > 10% discount on all deliveries > Dedicated account manager > First access to new routes > > Your VIP code: SWIFT-VIP-{customer_id} > > Thank you for choosing SwiftMove!"

The 80/20 Rule Explained: In most businesses, a small number of customers generate most of the revenue. For example, if Bella's Boutique has 2,500 customers, about 500 of them (20%) probably account for ₦8 out of every ₦10 in revenue. These 500 customers deserve special treatment because losing them would be devastating. The VIP Campaign ensures they feel valued and stay loyal.

Campaign 5: Cart Abandonment Recovery

Tier: Tier 2 (Professional and Business plans) | **Category:** Recovery

What it does: When a customer adds items to their online shopping cart but leaves without completing the purchase, this campaign automatically sends reminder messages to bring them back to finish buying.

How it works: The campaign detects abandoned carts from your connected Shopify or WooCommerce store and sends a 3-message recovery sequence:

Message	When	What It Says	Purpose
Gentle Nudge	1 hour after abandonment	"You left something in your cart!"	Remind them (maybe they got distracted)
Incentive	24 hours after	"Still thinking about it? Here's 10% off"	Give them a reason to complete
Urgency	72 hours after	"Your cart items are selling fast! Last chance"	Create urgency

Who should use it: Businesses with online stores on Shopify or WooCommerce. If you do not have an online store, this campaign does not apply to you.

Requires: E-commerce integration (see Section 14)

Expected results: 22% cart recovery rate. That means if 100 customers abandon their carts, about 22 will come back and complete their purchase.

Example message (Gentle Nudge — 1 hour): > "Hi {first_name}!
> > You left some beautiful items in your Bella's Boutique cart:
> > Ankara Maxi Dress — ₦25,000 > Matching Clutch Bag — ₦8,000
> > Your items are waiting for you! Complete your order here: {cart_link}
> > Need help? Just reply to this message!"

Example: Bella's Boutique Recovering Abandoned Carts

Bella's online Shopify store had an average of 45 abandoned carts per week, worth about ₦1,350,000 in potential revenue. After setting up the Cart Abandonment Campaign:

- **Week 1:** 45 abandoned carts → 11 recovered (24% recovery) → ₦330,000 recovered
- **Week 2:** 52 abandoned carts → 10 recovered (19% recovery) → ₦310,000 recovered
- **Week 3:** 38 abandoned carts → 9 recovered (24% recovery) → ₦285,000 recovered

- **Month total:** ₦1,250,000 in recovered revenue that would have been completely lost

Bella now considers this her most profitable campaign because it recovers money that was already almost in her pocket.

Important: This campaign requires a connected e-commerce store (Shopify or WooCommerce). See Section 14 for setup instructions.

Campaign 6: Seasonal Promotions

Tier: Tier 2 (Professional and Business plans) | **Category:** Growth

What it does: Pre-built campaign templates for Nigerian holidays and seasonal events. Instead of creating promotions from scratch, you get ready-made templates that you just customize with your specific offers.

How it works: The CRM includes templates for these Nigerian holidays and events:

Holiday/Event	Typical Timing	Best For
Eid al-Fitr	End of Ramadan	Restaurants, fashion, gifts
Eid al-Adha	~2 months after Eid al-Fitr	Restaurants, fashion, gifts
Christmas	December	All businesses
Easter	March/April	Restaurants, gifts, fashion
Valentine's Day	February 14	Restaurants, salons, fashion, gifts
Independence Day	October 1	All businesses (patriotic promotions)
Black Friday	Last Friday of November	All businesses (biggest discount day)
Mother's Day	March (varies)	Salons, restaurants, gifts
Father's Day	June (varies)	Restaurants, fashion, gifts
Back to School	September	Education, fashion, stationery
New Year	January 1	All businesses (new year, new offers)

Holiday/Event	Typical Timing	Best For
Anniversary Sales	Your business anniversary	All businesses

Each template includes: - Pre-written messages (just add your specific offer) - Suggested timing (when to start the campaign before the holiday) - Audience recommendations - Image suggestions

Who should use it: Any business. Holidays are the best time to run promotions because customers are already in a buying mood.

Expected results: 30-50% higher engagement than regular (non-holiday) promotions.

Example: Mama Nkechi's Christmas Special Menu

Two weeks before Christmas, Mama Nkechi launched a Seasonal Promotion campaign:

- **Message 1** (Dec 15): "Christmas is coming! Pre-order Mama Nkechi's Special Christmas Jollof Rice Party Pack (serves 10) for just ₦15,000. Limited slots!"
- **Message 2** (Dec 20): "Only 5 days to Christmas! We're almost fully booked. Reserve your Christmas Party Pack now — Reply XMAS to order!"
- **Message 3** (Dec 23): "Last call! Tomorrow is the deadline for Christmas orders. Don't miss out!"

Result: 120 party packs ordered (₦1,800,000 in revenue), making it Mama Nkechi's best December ever.

Campaign 7: Referral Program

Tier: Tier 2 (Professional and Business plans) | **Category:** Growth

What it does: Turns your happy customers into recruiters who bring you new customers. The campaign identifies satisfied customers, gives them a unique referral code, and rewards both the referrer and the new customer.

How it works:

1. The CRM identifies customers with high satisfaction scores (positive sentiment) or high RFM scores
2. Sends them a referral invitation with a unique code
3. When a new customer uses the code, both parties get a reward
4. The referrer gets notified and thanked

Step	What Happens
Identification	CRM finds happy, loyal customers (RFM 8+)
Invitation	"Love our service? Share with friends and earn rewards!"
Sharing	Customer shares their unique referral code
Redemption	New customer uses the code
Reward	Both referrer and new customer get a reward
Thank You	Referrer gets a thank-you message

Who should use it: Any business wanting to grow through word-of-mouth. Referral customers are typically 4x more likely to become loyal customers than customers acquired through advertising.

Expected results: 2-3 new customers per referrer on average.

Example message: > "Hi {first_name}! > > Thank you for being an amazing TechHub Academy student! We're so glad you enjoyed the {course_name} course. > > Know someone who wants to learn tech skills? Share your personal referral code and you BOTH get rewarded: > > Your friend gets: ₦10,000 off any course > You get: ₦10,000 credit for your next course > > Your referral code: **TECH-{first_name}-{code}** > > Just tell your friend to mention this code when registering! > > Share the knowledge! "

Example: TechHub Academy Student Referrals

TechHub Academy sent referral invitations to 150 students who completed courses with high satisfaction ratings. In 2 months:

- 150 referral invitations sent
- 89 students shared their codes (59% participation)
- 234 new students enrolled using referral codes
- Average 2.6 new students per referrer
- Revenue from referral students: ₦11,700,000
- Cost of referral rewards: ₦2,340,000 (₦10,000 × 234 referrals)
- **Net revenue: ₦9,360,000** from a campaign that cost almost nothing to run

The referral program became TechHub's most cost-effective growth channel, outperforming their Instagram ads by 3x in terms of cost per acquisition.

Campaign 8: Feedback Collection

Tier: Tier 2 (Professional and Business plans) | **Category:** Engagement

What it does: Collects honest feedback from your customers using a smart, satisfaction-gated approach. Instead of blindly asking everyone for a review, it first checks if the customer is happy. Happy customers get directed to leave public reviews. Unhappy customers get routed to your customer service team for resolution.

How it works:

Step	What Happens	If Happy	If Unhappy
Step 1	"How was your experience? Rate 1-5"	→ Step 2	→ Step 3
Step 2	"Glad you loved it! Would you leave us a review?"	Sends Google/Facebook review link	—
Step 3	"We're sorry to hear that. What can we do better?"	—	Routes to customer service
Step 4	Follow-up after resolution	Thank you message	"We've fixed the issue. How are we doing now?"

Who should use it: Any business wanting more positive reviews and fewer negative ones. The satisfaction-gating approach is the key — it protects your online reputation while still collecting valuable feedback.

Expected results: 35% response rate. Of those who respond, happy customers are 4x more likely to leave a public review when asked directly after expressing satisfaction.

Smart feature: The system only sends review links to customers who rated 4 or 5 out of 5. Customers who rated 1-3 are connected with your team to resolve their issues. This means your Google and Facebook reviews will be overwhelmingly positive — because only happy customers are asked to review.

Example: TechHub Academy Course Feedback

After each course ends, TechHub sends the Feedback Collection campaign to all students:

1. **Day 1 after course:** “Hi {first_name}! You just completed {course_name}. How would you rate your experience? Reply with a number 1-5 (5 being excellent)”
2. Students who reply 4-5: “Amazing! We’re so glad you enjoyed it! Would you mind sharing your experience on Google? It helps other students find us: {review_link}”
3. Students who reply 1-3: “We’re sorry the course didn’t meet your expectations. Our academic coordinator will reach out to you within 24 hours to discuss how we can make it right.”

Result: 210 students surveyed → 74 responded (35%) → 58 rated 4-5 → 41 left Google reviews → TechHub’s Google rating went from 3.8 to 4.4 stars in 3 months.

Campaign 9: New Product Launch

Tier: Tier 2 (Professional and Business plans) | **Category:** Growth

What it does: Creates buzz and drives sales when you launch a new product or service. Instead of a single announcement, it builds anticipation with a teaser, makes a splash with the launch, and follows up with an early-bird offer.

How it works: A 3-message sequence:

Message	When	What It Says	Purpose
Teaser	3-5 days before launch	“Something exciting is coming...”	Build anticipation and curiosity
Launch Announcement	Launch day	“It’s here! Introducing [product]”	Make the big reveal
Early Bird Offer	2 days after launch	“Early bird special: [X]% off for the first [N] customers”	Drive immediate sales

Who should use it: Any business launching a new product, service, menu item, course, or collection.

Expected results: 3x higher engagement compared to cold announcements (sending a single message without any buildup).

Example: Bella’s Boutique New Collection Launch

Bella is launching her new “Lagos Nights” evening wear collection. Here is her campaign:

- **Day 1 (Teaser):** “Something stunning is coming to Bella’s Boutique... Can you guess? Reply with your guess and the first 10 correct answers win a surprise gift!”
- **Day 4 (Launch):** “Introducing the LAGOS NIGHTS Collection! Elegant evening wear for the modern Nigerian woman. 12 stunning pieces from ₦18,000 to ₦65,000. See the full collection: {catalog_link}”
- **Day 6 (Early Bird):** “Early bird alert! Get 15% off any Lagos Nights piece this week only. Use code LAGOSNIGHT15 at checkout. Only 50 codes available — first come, first served!”

Result: The teaser generated 180 replies (customers guessing what was coming). The launch announcement had a 91% open rate. The early bird offer sold 38 pieces in 3 days, generating ₦1,140,000 in revenue.

Campaign 10: Loyalty Program

Tier: Tier 2 (Professional and Business plans) | **Category:** Retention

What it does: Replaces physical loyalty cards with a digital loyalty program. Customers earn points for purchases, and the system automatically tracks their progress and sends tier upgrade notifications.

How it works:

Component	How It Works
Points	Customers earn 1 point per ₦100 spent (customizable)
Tiers	Bronze (0-499 pts) → Silver (500-999 pts) → Gold (1000-2499 pts) → Platinum (2500+ pts)
Rewards	Each tier unlocks better rewards (discounts, free items, priority service)
Notifications	Auto-messages when customers earn points, reach new tiers, or have rewards expiring

Who should use it: Businesses wanting to increase repeat purchases. Especially effective for restaurants, salons, retail stores, and any business with regular customers.

Expected results: 25-40% increase in repeat purchases. Loyalty program members spend 12-18% more per transaction than non-members.

Example: GlowUp Salon Loyalty Card Replacement

GlowUp Salon used to have physical stamp cards — “Get 10 stamps, get a free treatment.” But cards got lost, forgotten, or damaged. They switched to the digital Loyalty Program:

Their tier structure: - **Bronze** (0-499 points): 5% off all treatments - **Silver** (500-999 points): 10% off + free hair wash with any treatment - **Gold** (1,000-2,499 points): 15% off + free hair wash + birthday month double points - **Platinum** (2,500+ points): 20% off + free hair wash + birthday month double points + priority booking + free quarterly treatment

Auto-messages sent: - After each visit: “You earned {points} points today! Total: {total_points}. You’re {remaining} points away from {next_tier}!” - Tier upgrade: “ Congratulations {first_name}! You’ve reached GOLD status! You now enjoy 15% off all treatments. Thank you for being a loyal GlowUp client!” - Points expiring: “Reminder: You have {points} points expiring in 30 days. Book a treatment to use them!”

Result: In 6 months, 340 clients enrolled in the loyalty program. Repeat visit frequency increased by 35%. Average spend per visit increased by 18%. Client retention rate improved from 62% to 81%.

Campaign 11: WhatsApp Survey Forms

Tier: Tier 3 (Business plan only) | **Category:** Engagement

What it does: Creates interactive surveys and forms that customers can fill out directly inside WhatsApp — no need to open a browser or visit a website. Uses WhatsApp Flows technology to create a smooth, app-like experience within the chat.

How it works: 1. You design a form using the Flow Builder (see Section 16) 2. The campaign sends the form to selected customers 3. Customers tap a button in the chat to open the form 4. They fill it out within WhatsApp (dropdown menus, text fields, date pickers, etc.) 5. Responses are collected automatically in your CRM

Who should use it: Businesses needing structured data collection — appointment bookings, event registrations, customer surveys, order forms, feedback forms.

Expected results: 60% completion rate (compared to 20% for email surveys and 10% for web surveys). WhatsApp Forms have the highest completion rate because customers do not need to leave the app they are already using.

Example: GlowUp Salon Appointment Booking

GlowUp created a WhatsApp Flow for appointment booking:

What the customer sees: 1. They receive a message: “Book your next GlowUp appointment! Tap the button below ” 2. They tap “Book Now” and a form opens inside WhatsApp: - **Select Branch:** Lekki / Ikeja / Abuja (dropdown) - **Select Service:** Haircut / Braids / Nails / Facial / Full Package (dropdown) - **Preferred Date:** Calendar date picker - **Preferred Time:** Morning / Afternoon / Evening (dropdown) - **Special Requests:** Free text field 3. They tap “Submit” 4. They get a confirmation: “Your appointment is booked! {service} at {branch} on {date} at {time}. We’ll send a reminder 24 hours before.”

Result: GlowUp went from handling 30+ booking calls per day to having 80% of bookings come through WhatsApp Forms. Staff time spent on phone bookings dropped by 75%, and no-show rates decreased by 40% (because of automatic reminders).

Campaign 12: Product Catalog Browsing

Tier: Tier 3 (Business plan only) | **Category:** Growth

What it does: Lets customers browse your product catalog directly inside WhatsApp. They can view categories, see product images and prices, and make inquiries — all without leaving the chat.

How it works: 1. Your product catalog (from Section 9) is synced to WhatsApp 2. Customers receive a message with a “Browse Products” button 3. They tap the button and see your product categories 4. They can browse, view details, and tap “Inquire” or “Order” on any product 5. Their inquiry comes to your inbox as a regular message

Who should use it: Businesses with product catalogs — retail stores, restaurants (menu), beauty supply stores, electronics shops, etc.

Expected results: 40% of customers who browse the catalog make an inquiry. 25% of inquiries convert to purchases.

Example: Bella's Boutique WhatsApp Shopping

Bella synced her 150-product catalog to WhatsApp. Now when customers message asking "What do you have?", instead of sending 20 photos one by one, she sends the catalog:

What the customer sees: 1. Message: "Welcome to Bella's Boutique! Browse our latest collection:" 2. They tap "View Catalog" 3. They see categories: Ankara Dresses | Corporate Wear | Accessories | Bridal | Plus Size 4. They tap "Ankara Dresses" and see a scrollable list with images, names, and prices 5. They tap a dress they like and see full details + "Order Now" button 6. They tap "Order Now" and a message is sent to Bella: "I'd like to order the Ankara Maxi Dress (₺25,000)"

Result: Customer browsing time increased by 3x (they explored more products). Average order value increased by 30% because customers discovered products they would not have seen otherwise. Bella's team saved 2 hours per day that was previously spent sending individual product photos.

Campaign 13: Ad Lead Nurturing

Tier: Tier 3 (Business plan only) | **Category:** Growth

What it does: Automatically follows up with leads who click on your Facebook or Instagram Click-to-WhatsApp (CTWA) ads. Instead of letting these expensive ad leads go cold, the campaign nurtures them with a sequence of messages until they convert.

How it works: 1. A potential customer sees your Facebook/Instagram ad and clicks "Send WhatsApp Message" 2. They land in your WhatsApp inbox 3. The CRM detects they came from an ad (using CTWA tracking) 4. The nurture sequence begins automatically:

Message	When	What It Says
Welcome	Immediately	"Thanks for your interest! Here's what we offer..."
Value Proposition	24 hours later	"Here's why [X] customers choose us..."
Social Proof	48 hours later	"See what our customers say..." + testimonials

Message	When	What It Says
Offer	72 hours later	"Special offer for new customers: [discount]"
Last Chance	5 days later	"Still interested? This offer expires soon..."

Who should use it: Any business running Facebook or Instagram ads with Click-to-WhatsApp buttons. If you are spending money on ads, this campaign ensures you get the maximum return on that investment.

Expected results: 3x higher conversion rate compared to manual follow-up. Without this campaign, most ad leads go cold within 24 hours because businesses do not follow up fast enough.

Example: TechHub Academy Ad Leads

TechHub runs Instagram ads promoting their "Full Stack Web Development" course. The ad has a "Send WhatsApp Message" button. Before the Ad Lead Nurturing campaign, their process was: - Lead clicks ad → sends WhatsApp message → waits for manual reply → often waits hours → loses interest → never enrolls

After setting up the campaign: - Lead clicks ad → instant automated welcome with course details → 24hr follow-up with student success stories → 48hr testimonial video → 72hr early enrollment discount → 5-day final reminder

Result: Conversion rate went from 8% (manual follow-up) to 24% (automated nurture). With 200 ad leads per month, that is 48 enrollments instead of 16 — an extra 32 students per month at ₦150,000 each = ₦4,800,000 in additional monthly revenue.

Campaign 14: Unhappy Customer Recovery →

Tier: Tier 3 (Business plan only) | **Category:** Retention

What it does: Uses AI sentiment analysis to detect when customers are unhappy (based on their message tone) and automatically triggers a recovery process. Instead of waiting for a customer to leave a bad review or stop buying, the system catches the problem early and helps you fix it.

How it works:

Step	What Happens
Detection	AI reads customer messages and detects negative sentiment

Step	What Happens
	(anger, frustration, disappointment)
Alert	Team member is notified immediately: “ Unhappy customer detected: {name}”
Auto-Response	Customer receives: “We’re sorry you’re having a bad experience. A manager will contact you within [X] hours.”
Escalation	Conversation is automatically assigned to a manager or senior team member
Recovery Offer	After the issue is discussed, a recovery offer is sent (discount, free item, etc.)
Follow-Up	7 days later: “Hi {name}, we wanted to check — has everything been resolved to your satisfaction?”

Who should use it: Any business that wants to prevent customer loss. It is much cheaper to recover an unhappy customer than to find a new one.

Expected results: 45% recovery rate of at-risk customers. Customers whose complaints are resolved quickly are 70% more likely to do business with you again.

Nigerian English and Pidgin support: The AI understands Nigerian English expressions and Pidgin. It can detect unhappiness in messages like: - “This thing no good at all” (Pidgin — negative) - “I’m not happy with this service” (Standard — negative) - “Wetin be this?” (Pidgin — frustration) - “You people are not serious” (Nigerian English — strong negative) - “Abeg, I need refund” (Pidgin — complaint)

Example: SwiftMove Logistics Handling Delivery Complaints

SwiftMove Logistics deals with delivery complaints regularly — late deliveries, damaged packages, wrong addresses. Before the Unhappy Customer Recovery campaign, complaints often went unnoticed until the customer posted on social media or stopped using the service.

Now with the campaign: 1. A customer messages: “My package was supposed to arrive yesterday and it’s still not here. This is very frustrating!” 2. The AI detects negative sentiment and flags the conversation 3. The customer immediately receives: “We sincerely apologize for the delay, {first_name}. We understand

how frustrating this is. Our logistics manager has been notified and will personally update you within 2 hours.” 4. The logistics manager gets an alert and contacts the customer 5. After resolving the issue, the customer receives a 15% discount code for their next delivery 6. 7 days later: “Hi {first_name}, we wanted to check in. Was your recent delivery experience better? Your feedback helps us improve.”

Result: Customer complaints resolved within 4 hours (down from 48 hours). Customer retention rate improved by 35%. Negative social media mentions decreased by 60%.

Campaign Tiers Explained

Not all campaigns are available on all plans. Here is which campaigns you get with each plan:

Campaign	Starter	Professional	Business
1. Win Back Dormant	✗	☑	☑
2. Birthday & Anniversary	✗	☑	☑
3. Post-Purchase Follow-Up	✗	☑	☑
4. VIP Exclusive Offers	✗	☑	☑
5. Cart Abandonment	✗	☑	☑
6. Seasonal Promotions	✗	☑	☑
7. Referral Program	✗	✗	☑
8. Feedback Collection	☑	☑	☑
9. New Product Launch	✗	✗	☑
10. Loyalty Program	✗	✗	☑
11. WhatsApp Survey Forms	✗	✗	☑
12. Product Catalog Browsing	☑	☑	☑
13. Ad Lead Nurturing	☑	☑	☑
14. Unhappy Customer Recovery	☑	☑	☑
Total Campaigns	4	10	14

How to Read Campaign Results

After launching a campaign, you can check its performance in the **Campaigns** section. Here is what each metric means:

Metric	What It Measures	Good Result	Warning Sign
Reach	How many customers received the campaign	Should match your target audience	Much lower = delivery issues
Open Rate	% of messages that were read	80%+ for WhatsApp	Below 60%
Response Rate	% of customers who replied	20%+	Below 10%
Conversion Rate	% of customers who took the desired action (bought, booked, etc.)	10%+	Below 5%
Revenue Generated	Total ₦ earned from the campaign	Positive ROI	Negative ROI
Opt-Out Rate	% of customers who unsubscribed	Below 2%	Above 5%
Cost per Conversion	How much each conversion cost you	Lower is better	Higher than customer value

Campaign Results Interpretation Guide

Your campaign is doing great if: - Open rate is above 80% -
 Response rate is above 20% - Conversion rate is above 10%
 - Revenue generated exceeds the cost of any discounts offered -
 Opt-out rate is below 1%

Your campaign needs adjustment if: - Open rate is 60-80%
 — Try sending at different times or improving your first line -
 Response rate is 10-20% — Improve your call-to-action or offer -
 Conversion rate is 5-10% — Your offer may not be compelling enough -
 Opt-out rate is 2-5% — You may be messaging too frequently

Your campaign needs a complete rethink if: - Open rate is below 60% — Your messages may be going to inactive numbers -
 Response rate is below 10% — Your message content is not

resonating - Conversion rate is below 5% — Your offer or targeting is wrong - Opt-out rate is above 5% — Stop the campaign and review your approach

Pro Tip: Do not judge a campaign by its first day. Give it at least a full cycle (all messages in the sequence) before evaluating. Some campaigns, like Win-Back, take 5 days to complete their full sequence.

Section 12: Automations

What Are Automations?

Automations are rules that tell the CRM: **“When THIS happens, do THAT.”** They work like a loyal employee who never forgets, never sleeps, and always follows instructions perfectly.

Instead of manually doing repetitive tasks, you set up the rule once and the CRM handles it automatically from then on.

Simple Examples

When THIS Happens (Trigger)	Do THAT (Action)	Why It Helps
New contact is added	Send a welcome message	Every new customer gets a warm greeting
Customer hasn't bought in 30 days	Add “Warm Dormant” tag	Automatically flags customers who are drifting away
Customer sends a message with “price”	Reply with price list	Instant response to common questions
Customer's birthday is tomorrow	Send birthday message	Never forget a customer's birthday
Customer makes a purchase over \$50,000	Add “VIP” tag	Automatically identifies high-value customers
Customer sends negative message	Alert the manager	Catches unhappy customers before they leave
New order from Shopify	Send order confirmation via WhatsApp	Instant order confirmation

When THIS Happens (Trigger)	Do THAT (Action)	Why It Helps
Customer clicks WhatsApp ad	Start nurture sequence	Automatically follows up with ad leads

How to Create an Automation

1. Click **Automations** in the sidebar menu (the lightning icon)
2. Click “+ New Automation”
3. **Name your automation** — Give it a clear, descriptive name (e.g., “Welcome New Customers”)
4. **Set the trigger** — Choose what event starts the automation:
 - Contact created
 - Contact updated
 - Tag added/removed
 - Message received
 - Message contains keyword
 - Purchase made
 - Deal stage changed
 - Scheduled time
 - Form submitted
 - Sentiment detected
5. **Set the condition** (optional) — Add extra rules:
 - Only if tag equals “VIP”
 - Only if branch equals “Lekki”
 - Only if purchase amount is greater than ₦10,000
6. **Set the action** — Choose what happens:
 - Send WhatsApp message
 - Send email
 - Add/remove tag
 - Assign to team member
 - Move deal to stage
 - Create a deal
 - Wait (delay before next action)
 - Send notification to team
7. **Add more actions** (optional) — You can chain multiple actions together
8. Click “**Save & Activate**”

Pre-Built Automations

The CRM comes with several pre-built automations you can activate with one click:

Automation	What It Does	Plan
Welcome New Contact	Sends a welcome message when a	All plans

Automation	What It Does	Plan
	new contact is added	
Tag Dormant Customers	Adds “Dormant” tag when a customer is inactive for 60+ days	All plans
VIP Auto-Tag	Adds “VIP” tag when a customer’s RFM score reaches 10+	All plans
Birthday Reminder	Sends birthday message on the customer’s birthday	All plans
Purchase Thank You	Sends a thank-you message after each purchase	Professional+
Negative Sentiment Alert	Notifies manager when negative sentiment is detected	Business
Ad Lead Welcome	Sends welcome sequence to Click-to-WhatsApp ad leads	Business
Cart Abandonment Trigger	Starts recovery sequence when a cart is abandoned	Professional+

8 Automation Recipe Ideas

Here are practical automation ideas you can set up for your business:

1. **The “We Miss You” Automation:** When a customer hasn’t interacted in 45 days → Send a “We miss you!” message with a small incentive
2. **The “Thank You” Automation:** When a purchase is recorded → Wait 1 hour → Send a thank-you message with care instructions or tips
3. **The “VIP Upgrade” Automation:** When a customer’s total spending exceeds ₦100,000 → Add “VIP” tag → Send VIP welcome message → Notify the manager
4. **The “Review Request” Automation:** When a customer rates their experience 4 or 5 stars → Wait 2 days → Send a Google review link

5. **The “Complaint Escalation” Automation:** When a message contains words like “refund”, “complaint”, “terrible”, “worst” → Add “Complaint” tag → Assign to manager → Send acknowledgment message
6. **The “New Arrival Alert” Automation:** When a product is added with the “New” tag → Send a broadcast to customers tagged with matching interests
7. **The “Follow-Up Reminder” Automation:** When a deal has been in the “Quote Sent” stage for 3 days → Send a follow-up message → Notify the sales person
8. **The “Re-engagement” Automation:** When a customer opens a message but doesn’t reply within 48 hours → Send a different message with a stronger call-to-action

Example: SwiftMove Logistics Auto-Routing Delivery Inquiries

SwiftMove set up automations to handle their most common customer interactions:

Automation 1: “Delivery Status Inquiry” - Trigger: Customer message contains “where is my package” or “delivery status” or “tracking” - Action 1: Reply with “We’re checking your delivery status now. Please share your order number and we’ll update you within 15 minutes.” - Action 2: Add tag “Status Inquiry” - Action 3: Assign to logistics team

Automation 2: “New Quote Request” - Trigger: Customer message contains “quote” or “how much” or “price for delivery” - Action 1: Reply with “Thank you for your interest! To give you an accurate quote, please tell us: 1) Pickup location 2) Delivery location 3) Package size/weight” - Action 2: Create a deal in the “Inquiry” pipeline stage - Action 3: Assign to sales team

Automation 3: “Complaint Detection” - Trigger: Negative sentiment detected - Action 1: Reply with “We’re sorry you’re having an issue. A manager will contact you within 2 hours.” - Action 2: Add tag “Complaint” - Action 3: Assign to manager - Action 4: Send notification to manager’s phone

Result: SwiftMove’s average response time dropped from 45 minutes to under 2 minutes for common inquiries. Customer satisfaction scores improved by 40%.

Pro Tip: Start with 2-3 simple automations and add more over time. The most impactful ones to start with are: Welcome New Contact, Purchase Thank You, and Complaint Escalation.

Common Mistake: Creating automations that send too many messages. If a customer triggers 3 different automations at once, they will receive 3 messages in quick succession, which feels spammy. Use conditions and delays to prevent message overload.

Section 13: AI Chatbot

What Is the AI Chatbot?

The AI Chatbot is your **24/7 virtual assistant** that answers customer questions automatically, even when you and your team are sleeping, eating, or on holiday. It uses artificial intelligence to understand what customers are asking and provide helpful answers.

Think of it as hiring a receptionist who: - Never takes a break - Knows everything about your business - Speaks English and Nigerian Pidgin - Can handle multiple conversations at the same time - Knows when to call a human for help

Available on: Professional plan (100 AI messages/month) and Business plan (unlimited)

How It Works

Here is the flow of an AI chatbot conversation:

Customer sends message

AI reads and understands the message

What AI Can and Cannot Do

AI Can Do	AI Cannot Do
Answer FAQs about your business	Process payments or refunds
Share business hours and location	Make decisions about complaints
Provide product information and prices	Access external systems (bank, etc.)
Explain your services	Guarantee delivery dates
Direct customers to the right team member	Negotiate prices
Greet customers and collect basic info	Handle sensitive personal information
Understand Nigerian English and Pidgin	Replace human empathy for serious issues
Handle multiple conversations at once	Make promises on your behalf
Work 24/7 without breaks	Understand voice notes or images

When AI Hands Off to a Human

The AI is smart enough to know when it cannot help. It will hand off to a human team member when:

1. The customer asks a question not in the Knowledge Base
2. The customer explicitly asks to speak to a human ("I want to talk to a person")
3. The customer expresses strong negative emotion
4. The conversation involves a complaint or refund request
5. The customer asks about something that requires a decision (custom pricing, special requests)
6. The AI has answered 3 questions and the customer is still not satisfied

When handoff happens, the customer sees: "I'll connect you with a team member who can help you better. Please hold on for a moment!"

Teaching AI About Your Business (Knowledge Base)

The AI chatbot is only as good as the information you give it. The **Knowledge Base** is where you teach the AI about your business.

How to add Knowledge Base entries:

1. Go to **AI Chatbot** in the sidebar (the robot icon)
2. Click the **“Knowledge Base”** tab
3. Click **“+ Add Entry”**
4. Fill in:
 - **Question** — What customers might ask (e.g., “What are your business hours?”)
 - **Answer** — The correct answer (e.g., “We are open Monday to Friday, 9am to 6pm, and Saturday 9am to 1pm.”)
 - **Category** — Group related entries (e.g., “Business Info”, “Products”, “Pricing”)
 - **Keywords** — Words that trigger this answer (e.g., “hours”, “open”, “close”, “time”)
5. Click **Save**

Example: 10 Essential FAQ Entries for Any Business

#	Question	Answer	Category
1	What are your business hours?	We are open Mon-Fri 9am-6pm, Sat 9am-1pm (WAT)	Business Info
2	Where are you located?	[Your address with landmark]	Business Info
3	What do you sell/offer?	[Brief description of products/services]	Products
4	What are your prices?	[Price range or link to price list]	Pricing
5	Do you deliver?	[Delivery info, areas covered, fees]	Delivery
6	How can I pay?	We accept bank transfer, card payment, and cash	Payment
7	Do you have a return policy?	[Your return/refund policy]	Policies
8	How do I place an order?	[Step-by-step ordering process]	Orders
9	Do you have [popular item]?	[Availability info]	Products

#	Question	Answer	Category
10	Can I book an appointment?	[Booking process or link]	Booking

Start with these 10 entries and add more as you notice customers asking questions the AI cannot answer.

Nigerian Pidgin Support

The AI chatbot understands Nigerian Pidgin English! Customers can ask questions in Pidgin and get appropriate responses:

- Customer: “Wetin una dey sell?” → AI responds with product information
- Customer: “How much be this thing?” → AI responds with pricing
- Customer: “Abeg, I wan order” → AI guides them through the ordering process
- Customer: “Where una dey?” → AI responds with location information

You can also write Knowledge Base answers in Pidgin for a more natural feel, or let the AI translate automatically.

Turning AI On and Off

1. Go to **AI Chatbot** settings
2. You will see a toggle switch: **AI Chatbot Active** (On/Off)
3. Click the toggle to turn it on or off
4. When OFF, all messages go directly to your human team
5. When ON, AI handles initial responses and hands off when needed

You can also set **AI hours** — for example, AI is active from 6pm to 9am (after hours) and human agents handle messages during business hours.

Example: Mama Nkechi’s After-Hours Chatbot

Mama Nkechi’s Kitchen closes at 8pm, but customers often message late at night asking about the next day’s menu. Before the chatbot, these messages went unanswered until morning, and some customers ordered from competitors instead.

Now, her AI chatbot handles after-hours messages:

Customer (9:30 PM): “Good evening, what’s on the menu tomorrow?”

AI: “Good evening! Thank you for messaging Mama Nkechi’s Kitchen. Tomorrow’s specials will be announced by 8:30 AM, but our regular menu is always available:

Jollof Rice — ₦2,000 Egusi Soup with Pounded Yam — ₦2,500 Peppered Chicken — ₦1,500 Fresh Zobo — ₦500

Would you like to pre-order from our regular menu, or shall I notify you when tomorrow’s specials are announced?”

Customer: “I wan order jollof rice and chicken for tomorrow”

AI: “Great choice! To confirm your pre-order: - Jollof Rice — ₦2,000 - Peppered Chicken — ₦1,500 - **Total: ₦3,500**

What time would you like to pick up or have it delivered? Our delivery fee is ₦500 within Surulere.”

Result: Mama Nkechi now captures 15-20 additional orders per week from after-hours messages, adding about ₦70,000-₦100,000 in weekly revenue that she was previously losing.

Pro Tip: Check the AI chatbot’s conversation logs weekly. Look for questions the AI could not answer and add those to your Knowledge Base. The more you teach it, the better it gets.

Common Mistake: Setting up the AI chatbot with only 2-3 Knowledge Base entries. The AI needs at least 10-15 entries to be useful. Spend 30 minutes adding your most common customer questions.

Section 14: E-Commerce Integration

What Is E-Commerce Integration?

If you sell products online through **Shopify** or **WooCommerce**, you can connect your online store to the CRM. This connection automatically syncs your customers, orders, and products — so everything is in one place.

Do You Need It?

Your Situation	Do You Need E-Commerce Integration?
I sell only in a physical store	No — but you can still use the CRM for all other features
I sell online through Shopify	

Your Situation	Do You Need E-Commerce Integration?
	Yes — connect your Shopify store
I sell online through WooCommerce	Yes — connect your WooCommerce store
I sell on Instagram/WhatsApp only	No — but consider setting up a Shopify store for cart tracking
I sell both online and in-store	Yes — connect your online store for automatic syncing
I plan to start selling online soon	Not yet — set it up when your store is ready

Available on: Professional and Business plans

Connecting Shopify

1. Go to **Settings** → **Integrations** tab
2. Find **Shopify** and click **“Connect”**
3. Enter your **Shopify store URL** (e.g., “bellasboutique.myshopify.com”)
4. Click **“Authorize”** — you will be redirected to Shopify to approve the connection
5. In Shopify, click **“Install App”** to authorize the CRM
6. You will be redirected back to the CRM with a success message
7. The initial sync will begin — this may take a few minutes depending on how many products and customers you have

Connecting WooCommerce

1. Go to **Settings** → **Integrations** tab
2. Find **WooCommerce** and click **“Connect”**
3. Enter your **WooCommerce store URL** (e.g., “www.bellasboutique.com”)
4. Enter your **Consumer Key** and **Consumer Secret** (found in WooCommerce → Settings → Advanced → REST API)
5. Click **“Connect”**
6. The initial sync will begin

What Happens After Connection

Once connected, the following happens automatically:

What Syncs	How Often	What It Means for You
New customers	Real-time	Every new online customer is automatically added as a CRM contact
Orders	Real-time	Every order is recorded in the customer's purchase history
Products	Every 6 hours	Your product catalog stays up to date
Cart abandonment	Real-time	When someone adds items to cart but doesn't buy, the CRM knows
Order status	Real-time	When an order ships or is delivered, the CRM is updated

Cart Abandonment Detection

This is one of the most valuable features of e-commerce integration. When a customer: 1. Visits your online store 2. Adds items to their cart 3. Leaves without completing the purchase

The CRM detects this and can automatically: - Send a WhatsApp reminder (if Cart Abandonment Campaign is active) - Add a "Cart Abandoned" tag to the contact - Create a deal in your pipeline - Notify your sales team

Order Status Notifications

Keep customers informed about their orders automatically: - **Order Confirmed:** "Your order #1234 has been confirmed! We're preparing it now." - **Order Shipped:** "Great news! Your order #1234 has been shipped. Track it here: {link}" - **Order Delivered:** "Your order #1234 has been delivered! We hope you love it."

Catalog Sync (Business Plan)

On the Business plan, your product catalog is synced to WhatsApp, allowing customers to browse products directly in the chat (see Campaign Template #12: Product Catalog Browsing).

Pro Tip: If you do not have an online store yet but want to use cart abandonment features, consider setting up a basic Shopify store. Shopify has a free trial and affordable plans starting from about ₦15,000/month.

Section 15: QR Codes

What QR Codes Do for Your Business

A **QR code** is a square barcode that customers can scan with their phone camera. When they scan your QR code, it opens a WhatsApp chat with your business — pre-filled with a greeting message. No need to save your number, no need to type anything.

QR codes bridge the gap between your **physical business** and your **digital CRM**. A customer walks into your shop, scans the QR code, and instantly becomes a contact in your CRM.

Creating a WhatsApp QR Code

1. Click **QR Codes** in the sidebar menu (the QR icon )
2. Click “+ Create QR Code”
3. Fill in:
 - **Name** — A label for this QR code (e.g., “Shop Counter QR”, “Business Card QR”)
 - **Pre-filled Message** — What the customer’s first message will say (e.g., “Hi! I scanned your QR code at the shop. I’d like to know more about your services.”)
 - **Welcome Reply** — The automatic reply they receive (e.g., “Welcome! Thanks for connecting with us. How can we help you today?”)
 - **Auto-Tag** — Automatically tag contacts who scan this QR code (e.g., “Walk-in”, “Shop-QR”)
4. Click “**Generate QR Code**”
5. Your QR code appears on screen
6. Click “**Download**” to save it as an image (PNG)

Where to Use QR Codes

Location	How to Use It	Why It Works
Shop counter/ reception	Print and display in a frame	Customers can connect while waiting
Receipts	Print QR code on receipts	Captures customers after purchase
Business cards		

Location	How to Use It	Why It Works
	Add QR code to your card	Easy way for contacts to reach you
Flyers & posters	Include on promotional materials	Turns offline marketing into online leads
Product packaging	Print on bags, boxes, labels	Customers can reorder easily
Shop window	Display a large QR code poster	Attracts walk-by traffic
Social media	Share as an image post	Followers can connect on WhatsApp
Event booths	Display at trade shows, markets	Captures leads at events
Vehicle branding	Add to delivery vehicles	Mobile advertising that captures leads
Menu/catalog	Print on physical menus	Customers can order via WhatsApp

QR Code Templates

The CRM offers several QR code design templates: - **Standard** — Simple black and white QR code - **Branded** — QR code with your business logo in the center - **Colored** — QR code in your brand colors - **Framed** — QR code with a decorative frame and call-to-action text (“Scan to chat with us!”)

Example: GlowUp Salon Reception QR Code

GlowUp Salon placed a branded QR code at their reception desk with the text: “Scan to book your next appointment & get 10% off!”

Setup: - Pre-filled message: “Hi GlowUp! I’m at the salon and would like to connect on WhatsApp for future bookings.” - Welcome reply: “Welcome to GlowUp Salon! You’re now connected. You’ll receive appointment reminders, exclusive offers, and birthday surprises. Reply BOOK to schedule your next visit!” - Auto-tag: “Walk-in”, “QR-Reception”

Result: In the first month, 156 customers scanned the QR code. Of those: - 89 booked their next appointment via WhatsApp (57% conversion) - 34 referred friends using the referral program -

Average rebooking time decreased from 6 weeks to 3.5 weeks -
The salon captured customer data that was previously lost (walk-in customers who paid cash and left)

Pro Tip: Create different QR codes for different locations and purposes. This way, you can track which QR code generates the most contacts. For example, “Shop Counter QR” vs “Business Card QR” vs “Flyer QR” — each with a different auto-tag so you know where each customer came from.

Common Mistake: Making the QR code too small. On printed materials, the QR code should be at least 2cm × 2cm (about 1 inch × 1 inch). Smaller than that and some phones will have trouble scanning it.

Section 16: WhatsApp Forms (Flows)

What Are WhatsApp Flows?

WhatsApp Flows are **interactive forms and menus** that appear directly inside the WhatsApp chat. Instead of asking customers to visit a website or fill out a Google Form, you can collect structured information right inside the conversation.

Think of it like this: instead of a back-and-forth conversation where you ask one question at a time (“What service do you want?” → wait for reply → “What date?” → wait for reply → “What time?” → wait for reply), a Flow presents all the questions at once in a clean, app-like form that the customer fills out in seconds.

What Flows Can Do

Flow Type	What It Does	Example
Appointment Booking	Lets customers book appointments with date/time selection	Salon booking, restaurant reservation
Order Form	Collects order details in a structured format	Food orders, product orders
Customer Survey	Gathers feedback with rating scales and text fields	Post-service satisfaction survey
Registration Form	Collects customer information for sign-ups	Event registration, course enrollment

Flow Type	What It Does	Example
Quote Request	Gathers details needed to provide a price quote	Delivery quote, service estimate
Support Ticket	Creates structured support requests	Complaint form, issue report
Preference Collection	Asks customers about their preferences	Style preferences, dietary requirements

How Flows Look to Customers

When a customer receives a Flow, they see:

1. A regular WhatsApp message with a **button** (e.g., “Book Now”, “Order Here”, “Fill Form”)
2. They tap the button
3. A **full-screen form** opens inside WhatsApp (it looks like a mini-app)
4. The form has fields like:
 - **Dropdown menus** (select from a list)
 - **Text fields** (type an answer)
 - **Date pickers** (choose a date from a calendar)
 - **Radio buttons** (choose one option)
 - **Checkboxes** (choose multiple options)
5. They fill out the form and tap “**Submit**”
6. They return to the chat with a confirmation message

The entire process takes 30-60 seconds — much faster than a back-and-forth conversation.

Pre-Built Flow Templates

The CRM includes these ready-to-use Flow templates:

Template	Fields Included	Best For
Appointment Booking	Service, Date, Time, Branch, Special Requests	Salons, clinics, consultants
Food Order	Items (multi-select), Quantity, Delivery/Pickup, Address, Payment Method	Restaurants, bakeries, caterers
Product Inquiry	Product Category, Budget Range, Preferred Features, Contact Method	Retail, electronics, fashion

Template	Fields Included	Best For
Event Registration	Name, Email, Phone, Number of Guests, Dietary Requirements	Events, workshops, seminars
Feedback Survey	Overall Rating (1-5), Service Rating, Staff Rating, Comments, Would Recommend?	Any business
Delivery Quote	Pickup Location, Delivery Location, Package Size, Weight, Urgency	Logistics, delivery services
Customer Onboarding	Full Name, Birthday, Preferences, How Did You Hear About Us?	Any business (new customers)

Available on: Business plan (Tier 3 campaigns)

Example: GlowUp Salon Appointment Booking Flow

GlowUp Salon created an appointment booking Flow that replaced their phone-based booking system:

The Flow fields: 1. **Select Branch** (dropdown): Lekki / Ikeja / Abuja 2. **Select Service** (dropdown): Haircut (₦5,000) / Braids (₦15,000) / Nails (₦8,000) / Facial (₦12,000) / Full Package (₦35,000) 3. **Preferred Stylist** (dropdown): Any Available / Amara / Blessing / Chidinma 4. **Preferred Date** (date picker): Calendar selection 5. **Preferred Time** (dropdown): 9:00 AM / 10:00 AM / 11:00 AM / 12:00 PM / 1:00 PM / 2:00 PM / 3:00 PM / 4:00 PM 6. **Special Requests** (text field): "Any allergies or special requirements?"

After submission, the customer receives: > " Appointment Booked! > > Branch: Lekki > Service: Braids (₦15,000) > Stylist: Amara > Date: Saturday, July 5, 2026 > Time: 2:00 PM > > We'll send you a reminder 24 hours before. See you soon! "

Result: Booking time dropped from 5-minute phone calls to 45-second form submissions. Staff spent 75% less time on the phone. No-show rates decreased by 40% thanks to automatic reminders.

Pro Tip: Keep your Flows short — 5-7 fields maximum. Every extra field reduces completion rates. Only ask for information you truly need.

Section 17: Ad Lead Tracking

What Are Click-to-WhatsApp Ads?

Click-to-WhatsApp (CTWA) ads are Facebook and Instagram ads that have a **“Send WhatsApp Message”** button instead of a “Learn More” or “Shop Now” button. When someone clicks the ad, it opens a WhatsApp chat with your business.

These ads are extremely popular in Nigeria because: - Nigerians prefer WhatsApp over email or website forms - The conversation feels personal and immediate - Customers can ask questions before buying - No need for a website or landing page

How Ad Lead Tracking Works

Without the CRM, when someone clicks your WhatsApp ad, they just appear as a new chat in your WhatsApp. You have no idea: - Which ad they clicked - What product they were interested in - Whether they are a new or returning customer - How much you spent to get this lead

With the CRM’s Ad Lead Tracking, you get all of this information automatically:

1. Customer clicks your Facebook/Instagram CTWA ad
2. They land in your WhatsApp inbox
3. The CRM **detects** they came from an ad and records:
 - Which ad campaign they clicked
 - Which ad set and ad creative
 - The ad spend associated with this lead
 - The product or service they were interested in
4. The contact is automatically tagged as **“Ad Lead”** with the campaign name
5. If the Ad Lead Nurturing campaign is active, the nurture sequence begins automatically

The Ad Leads Dashboard

Click **Ad Leads** in the sidebar to see your ad lead analytics:

Metric	What It Shows
Total Ad Leads	

Metric	What It Shows
	Number of people who clicked your CTWA ads this period
Lead Source Breakdown	Which ad campaigns generated the most leads
Conversion Rate	% of ad leads who made a purchase
Cost per Lead	How much each ad lead cost you
Cost per Conversion	How much each converted customer cost you
Revenue from Ad Leads	Total revenue generated from ad leads
ROI	Return on investment for your ad spend
Response Time	Average time to first response for ad leads

Connecting to Facebook/Instagram Ads

1. Go to **Settings** → **Integrations** tab
2. Find **Facebook Ads** and click **“Connect”**
3. Log in to your Facebook account
4. Select the **Facebook Page** connected to your WhatsApp Business
5. Grant the required permissions
6. Click **“Complete Setup”**

Once connected, the CRM automatically tracks all CTWA ad leads.

Nurturing Ad Leads Automatically

The best way to convert ad leads is to combine Ad Lead Tracking with the **Ad Lead Nurturing Campaign** (Campaign Template #13). This ensures every ad lead receives a timely, personalized follow-up sequence — even if your team is busy.

See Section 11, Campaign 13 for full details on the nurture sequence.

Available on: Professional plan (basic tracking) and Business plan (full analytics)

Example: TechHub Academy Tracking Course Inquiry Ads

TechHub Academy runs Instagram ads for their “Data Science Bootcamp” with a CTWA button. Before the CRM: - 200 ad leads per month - Team manually replied to each one (often hours later) - No tracking of which ads worked best - Estimated 8% conversion rate

After connecting Ad Lead Tracking + Nurturing: - 200 ad leads per month (same) - Instant automated welcome + nurture sequence - Full visibility into which ad creatives generate the most enrollments - Conversion rate jumped to 24% - They discovered their “Student Success Story” ad creative converted 3x better than their “Course Curriculum” creative - They shifted budget to the winning creative and reduced cost per enrollment by 40%

Pro Tip: Check your Ad Leads dashboard weekly. Look for which ad campaigns have the highest conversion rate (not just the most leads) and shift your budget accordingly.

Section 18: Sentiment Analysis

What Is Sentiment Analysis?

Sentiment analysis is like having a **mood detector** for your customer conversations. The AI reads your customers’ messages and determines whether they are **happy**, **neutral**, or **unhappy** — in real time.

This matters because unhappy customers rarely tell you they are unhappy. They just stop buying. Sentiment analysis catches the warning signs early so you can fix problems before losing customers.

How It Works

1. Every incoming customer message is analyzed by AI
2. The AI assigns a **sentiment score**: Positive, Neutral, or Negative
3. The sentiment is displayed as a **badge** on the contact’s profile
4. Trends are tracked over time (is this customer getting happier or unhappier?)
5. If negative sentiment is detected, alerts and automations can be triggered

The Sentiment Dashboard

Click **Sentiment** in the sidebar to see:

Section	What It Shows
Overall Sentiment	Pie chart showing % positive, neutral, negative across all conversations
Sentiment Trend	Line chart showing sentiment changes over time (daily/weekly/monthly)
At-Risk Customers	List of customers with declining or negative sentiment
Top Issues	Common themes in negative messages (e.g., “delivery”, “quality”, “price”)
Team Performance	Sentiment scores by team member (who resolves issues best?)
Recovery Rate	% of negative-sentiment customers who became positive after intervention

Sentiment Badges on Contacts

When you view a contact’s profile, you will see a sentiment badge:

Badge	Meaning	Action Needed
Positive	Customer is happy and satisfied	Keep doing what you’re doing!
Neutral	Customer is neither happy nor unhappy	Monitor — could go either way
Negative	Customer is unhappy or frustrated	Immediate attention needed
Improving	Sentiment is trending upward	Good — your efforts are working
Declining	Sentiment is trending downward	Warning — intervene before it gets worse

Trend Tracking

The CRM tracks sentiment over time for each customer. This helps you spot patterns:

- **Sudden drop:** A previously happy customer becomes negative → Something specific happened (bad experience, delayed delivery, etc.)
- **Gradual decline:** Sentiment slowly decreasing over weeks → Customer is losing interest or experiencing repeated small issues
- **Recovery:** Negative → Positive → Your intervention worked!
- **Consistently positive:** Your VIP customers who love your business

Nigerian English and Pidgin Support

The sentiment AI is trained to understand Nigerian English expressions and Pidgin:

Customer Message	Detected Sentiment	Why
"This thing sweet well well!"	Positive	"Sweet well well" = very good
"E dey work, no wahala"	Positive	"No wahala" = no problem
"Na wa o, this service no good"	Negative	"Na wa o" + "no good" = frustration
"Wetin be this? I no happy at all"	Negative	"I no happy" = unhappy
"You people are not serious"	Negative	Common Nigerian expression of frustration
"Abeg, when my order go come?"	Neutral (leaning negative)	Polite but impatient
"Thank you, you try well well"	Positive	"You try" = you did well
"I go come back, the food sweet"	Positive	"I go come back" = I will return
"Make una do better abeg"	Negative	"Do better" = not satisfied
"E be like say una no dey hear word"	Negative	Strong frustration

Auto-Escalation for Negative Sentiment

When the AI detects negative sentiment, it can automatically:

1. **Tag the contact** as “At-Risk” or “Complaint”
2. **Assign the conversation** to a manager or senior team member
3. **Send an alert** to the manager’s phone
4. **Trigger the Unhappy Customer Recovery campaign** (Campaign #14)
5. **Log the issue** for the monthly satisfaction report

You can configure these auto-escalation rules in **Settings** → **Sentiment** tab.

Available on: Business plan

Example: SwiftMove Logistics Catching Delivery Frustration Early

SwiftMove Logistics handles hundreds of delivery conversations daily. Before sentiment analysis, unhappy customers would silently switch to competitors. The team only found out when they saw negative Google reviews.

With Sentiment Analysis: - The dashboard shows real-time sentiment across all conversations - When a customer messages “My package still never come, this is the third time I’m asking!” — the AI immediately flags it as negative - The logistics manager gets an alert and personally calls the customer - The issue is resolved within 2 hours instead of 2 days

Result: Customer complaints resolved 5x faster. Negative Google reviews dropped by 60%. Customer retention improved by 35%. The team now has a weekly “Sentiment Review” meeting where they discuss trends and address recurring issues.

Pro Tip: Pay special attention to customers whose sentiment is **declining** (trending downward). These are customers who are slowly becoming unhappy — and they are the easiest to save because the problem has not become * severe yet.

Section 19: Settings & Customization

The Settings page lets you customize the CRM to match your business. Click the **gear icon** in the sidebar to access Settings.

Profile Tab

Your business profile information:

Field	What to Enter	Example
Business Name	Your official business name	"Mama Nkechi's Kitchen"
Email	Your business email	"info@mamankechi.com"
Phone	Your business phone number	" +234 801 234 5678"
Currency	Your preferred currency	Nigerian Naira (₦)
Timezone	Your timezone	West Africa Time (WAT)
Address	Your business address	"15 Adeniran Ogunsanya St, Surulere, Lagos"
Website	Your website URL (if any)	"www.mamankechi.com"
Industry	Your business category	Restaurant / Retail / Salon / Logistics / Education

WhatsApp Tab

Manage your WhatsApp Business connection:

Setting	What It Does
Connection Status	Shows if your WhatsApp is connected (green) or disconnected (red)
Phone Number	The WhatsApp Business number connected to the CRM
Business Profile	Your WhatsApp Business profile (name, description, photo)
Reconnect	Button to reconnect if the connection drops
Message Templates	Manage your approved WhatsApp message templates

Email Tab

Configure email sending for email campaigns and notifications:

Setting	What It Does
Email Provider	Select your email provider (Brevo recommended — 300 free emails/day)
API Key	Your email provider's API key
From Name	The name that appears in the "From" field
From Email	The email address that appears in the "From" field
Reply-To Email	Where replies go
Test Email	Send a test email to verify your setup

SMS Tab (Coming Soon)

SMS messaging will be available in a future update. This tab shows: - "Coming Soon" message - Option to join the waitlist for SMS features - Estimated launch timeline

Appearance Tab

Customize how the CRM looks:

Setting	Options
Theme	Choose from 6 dark themes: Midnight Indigo (default), Ocean Blue, Forest Green, Royal Purple, Sunset Orange, Charcoal Grey
Mode	Light mode or Dark mode
Sidebar	Expanded (with labels) or Collapsed (icons only)
Font Size	Small, Medium (default), Large
Language	English (default)

The CRM uses **Playfair Display** for headings and **Source Sans 3** for body text — the official M4E brand fonts.

Template Manager

Manage your WhatsApp message templates:

Action	What It Does
View Templates	See all your approved templates

Action	What It Does
Create Template	Request a new template (requires WhatsApp approval)
Edit Template	Modify an existing template (requires re-approval)
Delete Template	Remove a template you no longer need
Template Status	See if templates are Approved, Pending, or Rejected

See Appendix L for a detailed guide on WhatsApp message templates.

Tags Tab

Manage the tags used to organize your contacts:

Action	What It Does
View Tags	See all tags with contact counts
Create Tag	Add a new tag (name + color)
Edit Tag	Change a tag's name or color
Delete Tag	Remove a tag (does not delete contacts)
Merge Tags	Combine two tags into one

Custom Fields Tab

Add custom data fields to your contacts:

Action	What It Does
View Fields	See all custom fields
Create Field	Add a new field (name, type, options)
Field Types	Text, Number, Date, Dropdown, Checkbox, URL, Email, Phone
Edit Field	Modify a field's settings
Delete Field	Remove a field (data in that field is lost)

Deals Settings Tab

Configure your sales pipeline:

Action	What It Does
Pipeline Stages	Add, rename, reorder, or delete pipeline stages
Default Pipeline	Set which pipeline new deals are added to
Deal Fields	Customize what information is tracked for each deal
Win/Loss Reasons	Define reasons for winning or losing deals

Recency Settings Tab

Configure how the CRM calculates customer recency status:

Setting	What It Controls	Default
Active Threshold	Days since last purchase to be considered "Active"	30 days
Warm Dormant	Days to be considered "Warm Dormant"	31-60 days
Cold Dormant	Days to be considered "Cold Dormant"	61-90 days
Hot Dormant	Days to be considered "Hot Dormant"	91-180 days
Lost	Days to be considered "Lost"	180+ days
Industry Preset	Pre-configured thresholds for your industry	General

Industry presets available: General, Restaurant, Retail, Salon/Beauty, Logistics, Education

Security Tab

Manage security settings:

Setting	What It Does
Change Password	Update your login password
Two-Factor Authentication	Enable/disable 2FA for extra security
Active Sessions	

Setting	What It Does
	See all devices logged into your account
API Keys	Manage API keys (Business plan only)
Data Export	Export all your data (NDPR compliance)
Delete Account	Permanently delete your account and all data

Common Mistake: Forgetting to set your timezone. If your timezone is wrong, scheduled broadcasts and campaigns will be sent at the wrong time. Make sure it is set to **West Africa Time (WAT)** if you are in Nigeria.

Section 20: Managing Your Team

Why Add Team Members?

As your business grows, you will not be able to handle all customer conversations alone. Adding team members to the CRM lets you:

- **Share the workload** — Multiple people can respond to customers at the same time
- **Specialize roles** — Sales team handles inquiries, support team handles complaints
- **Track performance** — See who is responding fastest and resolving the most conversations
- **Maintain control** — You decide who can see what and do what

Inviting Team Members

Step-by-step:

1. Go to **Settings** → **Team** tab
2. Click “**+ Invite Team Member**”
3. Enter their **email address**
4. Select their **role** (see roles below)
5. Select their **branch** (if you have multiple branches)
6. Click “**Send Invitation**”
7. They will receive an email with a link to create their account
8. Once they click the link and set up their password, they appear in your team list

The invitation link expires after 7 days. If it expires, you can resend it from the Team settings page.

The 4 Roles Explained

Every team member has a role that determines what they can see and do in the CRM:

1. Owner - This is you — the person who created the account - Full access to everything - Can manage billing, delete the account, and transfer ownership - There can only be one Owner per account

2. Admin - Almost the same access as the Owner - Can manage team members, settings, and campaigns - Cannot manage billing or delete the account - Best for: Your business partner or operations manager

3. Agent - Can view and respond to conversations - Can view contacts and update contact information - Can manage deals in the pipeline - Cannot change settings, manage team, or create campaigns - Best for: Sales staff, customer service representatives

4. Viewer - Can only view information — cannot make any changes - Can see conversations, contacts, and reports - Cannot reply to messages, edit contacts, or create anything - Best for: Accountants, external consultants, or trainees who need to observe

Permissions Table

Permission	Owner	Admin	Agent	Viewer
View dashboard	✔	✔	✔	✗
View conversations	✔	✔	✗	✗
Reply to messages	✔	✔	✗	✗
View contacts	✔	✔	✔	✔
Add/edit contacts	✔	✔	✔	✗
Import contacts	✔	✔	✗	✗
Delete contacts	✔	✔	✗	✗
View pipeline	✔	✔	✗	✗
Manage deals	✔	✔	✔	✔
Send broadcasts	✔	✔	✗	✗
Create campaigns				
Manage automations				
View reports				
Manage templates				

	✔	✔	✗	✗
	✔	✔	✗	✗
	✔	✔	✗	✗
Permission	Owner	Admin	Agent	Viewer
Manage AI chatbot	✔	✗	✗	✗
Manage team members	✔	✗	✗	✗
Change settings				
Manage billing				
Delete account				
Transfer ownership				

Removing Team Members

1. Go to **Settings** → **Team** tab
2. Find the team member you want to remove
3. Click the **three dots** (⋮) next to their name
4. Click **“Remove from Team”**
5. Confirm the removal

When you remove a team member: - Their conversations are reassigned to the default queue - Their account is deactivated (they can no longer log in) - Their activity history is preserved for your records - They do NOT receive a notification (you should inform them separately)

Best Practices for Team Setup

1. **Start with yourself as Owner** — Set up the CRM, learn how it works, then add team members
2. **Add one Admin** — Your most trusted team member who can manage things when you are unavailable
3. **Add Agents for customer-facing staff** — Sales people, customer service reps, receptionists
4. **Use Viewer for oversight** — Accountants who need to see revenue data, consultants reviewing your processes
5. **Assign branches** — If you have multiple locations, assign each team member to their branch
6. **Review access quarterly** — Remove team members who have left and update roles as needed

Example: Bella’s Boutique Team Setup

Bella’s Boutique has 4 people using the CRM:

Person	Role	Branch	What They Do
Bella (Owner)	Owner	All branches	Oversees everything, creates campaigns,

Person	Role	Branch	What They Do
			manages billing
Amaka (Store Manager)	Admin	Lagos	Manages daily operations, creates broadcasts, handles escalations
Chisom (Sales)	Agent	Lagos	Responds to customer inquiries, manages deals, processes orders
Ngozi (Sales)	Agent	Abuja	Responds to customer inquiries, manages deals, processes orders

Bella also added her accountant as a Viewer so he can see revenue reports without being able to change anything.

Pro Tip: When a team member leaves your business, remove them from the CRM immediately. Do not wait — they still have access to all your customer data until you remove them.

Common Mistake: Giving everyone Admin access. Only give Admin access to people you fully trust with your business settings. Most team members should be Agents.

Section 21: Multiple Branches

What Are Branches?

If your business has multiple locations, the CRM lets you manage them all from one account. Each location is called a **branch**. Branches help you:

- **Organize contacts** by location (which branch does this customer visit?)

- **Track performance** per location (which branch is generating the most revenue?)
- **Assign team members** to specific branches
- **Run branch-specific campaigns** (send promotions only to customers of a specific branch)
- **Generate branch-level reports** (compare performance across locations)

Setting Up Branches

1. Go to **Settings** → **Branches** tab
2. Click “+ Add Branch”
3. Fill in:
 - **Branch Name** — e.g., “Lekki Branch”, “Ikeja Branch”
 - **Address** — The physical address of this branch
 - **Phone** — The branch’s phone number
 - **Manager** — Select a team member as the branch manager
4. Click “**Save**”
5. Repeat for each branch

How Branches Work

Once branches are set up:

Feature	How Branches Affect It
Contacts	Each contact can be assigned to a branch. When you view contacts, you can filter by branch.
Conversations	Conversations can be filtered by branch. Agents see conversations for their assigned branch.
Broadcasts	You can send broadcasts to all contacts or only contacts of a specific branch.
Campaigns	Campaigns can target all branches or specific branches.
Reports	Dashboard shows overall numbers with branch-level breakdown available.
Team Members	Each team member can be assigned to one or more branches.
Pipeline	Deals can be tagged with a branch for location-specific tracking.

Branch-Level Reporting

The dashboard includes a **Branch Performance** section showing:

Metric	What It Shows
Contacts per Branch	How many customers each branch has
Revenue per Branch	Revenue generated by each branch
Response Time per Branch	Average response time at each branch
Campaign Performance per Branch	How campaigns perform at each location
Customer Satisfaction per Branch	Sentiment scores by branch

This helps you identify which branches are performing well and which need attention.

Assigning Contacts to Branches

Contacts can be assigned to branches in several ways:

1. **Manual assignment** — Edit a contact and select their branch
2. **During import** — Include a “Branch” column in your CSV file
3. **Via QR codes** — Create branch-specific QR codes that auto-tag contacts with the branch
4. **Via automations** — Set up rules like “If contact’s phone starts with 09, assign to Abuja branch”
5. **Via e-commerce** — If your online store has branch-specific shipping, contacts are auto-assigned

Branch-Specific Campaigns

When launching a campaign, you can choose the audience by branch:

- **All branches** — Campaign reaches all qualifying contacts across all locations
- **Specific branch** — Campaign only reaches contacts assigned to the selected branch
- **Multiple branches** — Select 2 or more branches to include

This is useful for location-specific promotions. For example, if your Lekki branch is having a special event, you only want to notify Lekki customers — not customers in Ikeja or Abuja.

Tips for Multi-Branch Businesses

1. **Create branch-specific QR codes** — Each branch gets its own QR code so you know where each customer came from
2. **Assign branch managers as Admins** — They can manage their branch's operations independently
3. **Run branch competitions** — Use branch-level reports to create friendly competition between locations
4. **Standardize but localize** — Use the same campaign templates across branches but customize the offers for each location
5. **Review branch performance monthly** — Compare metrics across branches to identify best practices and areas for improvement

Available on: Starter (1 branch), Professional (up to 3 branches), Business (unlimited branches)

Example: GlowUp Salon with Lekki, Ikeja, and Abuja Branches

GlowUp Salon has three branches. Here is how they use the CRM's branch features:

Branch setup:

Branch	Manager	Team Size	Contacts
Lekki	Amara (Admin)	3 agents	450 clients
Ikeja	Blessing (Admin)	2 agents	320 clients
Abuja	Chidinma (Admin)	2 agents	230 clients

How they use branches:

- **QR codes:** Each branch has its own QR code at reception. When a client scans it, they are automatically tagged with the branch name.
- **Broadcasts:** Lekki branch sends "Lekki-only" promotions (e.g., "Free parking this Saturday at our Lekki branch!"). Ikeja sends Ikeja-specific offers.
- **Campaigns:** The Birthday Campaign runs across all branches, but the VIP Campaign has different thresholds per branch (Lekki VIPs spend ₦50,000+, Ikeja VIPs spend ₦35,000+, Abuja VIPs spend ₦40,000+).
- **Reports:** The owner reviews branch performance weekly. Last month, Lekki had the highest revenue but Abuja had the best customer satisfaction score. The owner shared Abuja's best practices with the other branches.

- **Team:** Each branch manager (Admin) can manage their own team’s conversations and create branch-specific broadcasts. The owner oversees everything.

Result: Since implementing branch-level management, GlowUp has seen a 25% improvement in cross-branch consistency and a 15% increase in overall customer satisfaction.

Section 22: Billing & Plans

Three Plans Overview

The M4E Customer Reactivation Manager offers three subscription plans designed for different business sizes:

	Starter	Professional	Business
Best For	Small businesses just getting started	Growing businesses with multiple staff	Established businesses with advanced needs
Monthly Price	¥50,000/mo	¥120,000/mo	¥250,000/mo
Annual Price	¥480,000/yr	¥1,152,000/yr	¥2,400,000/yr
Annual Savings	¥120,000 (20% off)	¥288,000 (20% off)	¥600,000 (20% off)

Feature Comparison Table

Feature	Starter	Professional	Business
Contacts	500	2,000	Unlimited
Team Members	2	5	Unlimited
Branches	1	3	Unlimited
Broadcasts/month	500	2,000	10,000
Message Templates	5	20	Unlimited
Campaigns	4 (Tier 1)	10 (Tier 1-2)	All 14 (Tier 1-3)
Automations	3	10	Unlimited
AI Chatbot		Basic (100 msgs/mo)	Full (unlimited)

Feature	Starter	Professional	Business
E-Commerce Integration	✗	✗ Shopify/WooCommerce	✓ Full + Catalog Sync
CTWA Ad Tracking	✗	✗ Basic	✓ Full Analytics
Sentiment Analysis			
WhatsApp Flows			
QR Codes	✗ 2	✗ 10	✓ Unlimited
Pipeline	✗ 1 pipeline	✓ 3 pipelines	✓ Unlimited
Reports	Basic	Advanced	Advanced + Custom
API Access			
Priority Support			+ Dedicated Manager

Which Plan Is Right for You?

Choose Starter if: - You are a small business with fewer than 500 customers - You have 1-2 people managing customer communications - You want to try the CRM before committing to a higher plan - You mainly need basic messaging, contacts, and the 4 core campaigns

Choose Professional if: - You have 500-2,000 customers - You have a small team (3-5 people) - You want e-commerce integration (Shopify/WooCommerce) - You need more campaigns and automations - You want the AI chatbot for after-hours support

Choose Business if: - You have 2,000+ customers - You have a larger team or multiple branches - You want all 14 campaign templates - You need advanced features (sentiment analysis, WhatsApp Flows, ad tracking) - You want unlimited everything

Annual Discount (20% Off)

Paying annually saves you 20% compared to monthly billing:

Plan	Monthly Total (12 months)	Annual Price	You Save
Starter	₦600,000	₦480,000	₦120,000
Professional	₦1,440,000	₦1,152,000	₦288,000
Business	₦3,000,000	₦2,400,000	₦600,000

How to Upgrade

1. Go to **Settings** → **Billing** tab
2. You will see your current plan and usage
3. Click **“Upgrade Plan”**
4. Select the plan you want to upgrade to
5. Choose **Monthly** or **Annual** billing
6. Enter your payment details
7. Click **“Confirm Upgrade”**
8. Your new features are available immediately

Credit System for Service Package Upgrades

If you are an M4E service package client (Package 1, 2, 3, or Full Suite), your service package includes CRM access. If you want to upgrade your CRM plan beyond what is included in your service package, you receive a credit equal to the CRM value included in your package. You only pay the difference.

For example, if your service package includes the Professional plan (¥120,000/mo value) and you want to upgrade to Business (¥250,000/mo), you only pay the difference of ¥130,000/mo.

What Happens If You Cancel

Timeframe	What Happens
Immediately after cancellation	Your account continues to work until the end of your current billing period
End of billing period	Your account is downgraded to a read-only state
Read-only state	You can view your data but cannot send messages, create campaigns, or add contacts
30 days after expiry	You receive a reminder email to reactivate or export your data
90 days after expiry	Your data is permanently deleted (NDPR compliance)

Before cancelling, you can export all your data: 1. Go to **Settings** → **Security** tab 2. Click **“Export All Data”** 3. Choose format (CSV or JSON) 4. Your data will be prepared and a download link sent to your email

Pro Tip: Start with the Starter plan and upgrade as your business grows. You can upgrade at any time and your data is preserved. There is no penalty for starting small.

Common Mistake: Choosing the Business plan when you only have 200 customers. Start with Starter, learn the system, and upgrade when you actually need the extra features. You will save money and avoid paying for features you do not use yet.

Section 23: Troubleshooting

Before contacting support, check if your issue is listed here. Most problems have simple solutions.

Login Issues

Problem	Possible Cause	Solution
"Invalid email or password"	Wrong email or password	Double-check your email. Use the "Forgot Password" link to reset.
"Account not found"	Using wrong email	Try other email addresses you might have used to sign up. Check your email inbox for the original welcome email from M4E.
Forgot password	—	Click "Forgot Password" on the login page. Enter your email. Check your inbox (and spam folder) for the reset link.
Reset link expired	Link is only valid for 24 hours	Request a new reset link from the login page.
Page not loading	Internet connection issue	Check your internet connection. Try refreshing the page. Clear your browser cache. Try a different browser.
"Session expired"	You were logged out for security	This happens after 24 hours of inactivity. Simply log in again.
	Time sync issue	

Problem	Possible Cause	Solution
Two-factor code not working		Make sure your phone's time is set to automatic. If using an authenticator app, try the next code that appears.
Locked out after too many attempts	Security protection	Wait 15 minutes and try again. If still locked, contact support.

Message Issues

Problem	Possible Cause	Solution
Messages not sending	WhatsApp disconnected	Go to Settings → WhatsApp tab. Check if the status is green (connected). If red, click "Reconnect".
Messages stuck on "Sending" (clock icon)	Slow internet or WhatsApp issue	Wait a few minutes. If still stuck, check your internet connection and try refreshing the page.
Messages showing single tick only	Customer's phone is off or no internet	The message was sent but not yet delivered. It will be delivered when the customer comes online. Nothing you can do — just wait.
Template message rejected	Template not approved by WhatsApp	Check Settings → Template Manager. If the template status is "Rejected", edit it and resubmit. See Appendix L for template approval tips.
"Message failed" (red icon)	Various reasons	Check the error message. Common causes: invalid phone number,

Problem	Possible Cause	Solution
Cannot send images/documents	File too large	customer blocked you, template expired, or WhatsApp API issue. WhatsApp has file size limits: Images (5MB), Documents (100MB), Videos (16MB). Compress your file and try again.
Customer says they did not receive message	Message may be in their "Requests" folder	If you are messaging someone for the first time, WhatsApp may put your message in their "Message Requests" folder. Ask the customer to check there.
Quick replies not showing	No quick replies set up	Go to Settings → Template Manager → Quick Replies tab to create quick replies.

Campaign Issues

Problem	Possible Cause	Solution
Campaign not starting	Schedule set to future date	Check the campaign schedule. If it is set to start in the future, it will start at that time.
Campaign shows 0 recipients	No contacts match the criteria	Check the audience settings. Make sure you have contacts that match the selected tags, status, or branch.
Campaign paused automatically	Daily sending limit reached	WhatsApp has daily sending limits. The campaign will resume the next day.
Low open rates		

Problem	Possible Cause	Solution
	Messages sent at wrong time	Check when your messages were sent. Try scheduling for 10am-12pm or 4pm-7pm (peak WhatsApp usage in Nigeria).
High opt-out rate	Messaging too frequently or irrelevant content	Reduce frequency. Make sure your content is relevant to the audience. Review your targeting.
Campaign template says "Pending"	WhatsApp is reviewing the template	Template approval can take 24-48 hours. Wait for approval before launching the campaign.
Cannot launch Tier 2/3 campaigns	Plan limitation	Tier 2 campaigns require Professional plan. Tier 3 campaigns require Business plan. Upgrade to access them.

Contact Issues

Problem	Possible Cause	Solution
CSV import failed	File format issue	Make sure your file is saved as .csv (not .xlsx). Check that phone numbers include country code (+234). Check for special characters in names. See Appendix G for detailed import instructions.
Duplicate contacts	Same customer imported twice	Go to Contacts → click "Find Duplicates" (if available) or search

Problem	Possible Cause	Solution
Contact not showing tags	Tags not assigned	for the customer and merge the duplicates manually. Edit the contact and add tags manually, or set up automations to tag contacts automatically.
RFM scores showing 0	No purchase history	RFM scores are calculated from purchase data. If you have not recorded any purchases for this contact, their score will be 0.
Contact's recency status seems wrong	Recency thresholds may not match your business	Go to Settings → Recency Settings and adjust the thresholds. Try using an industry preset.
Cannot delete a contact	Contact has active conversations	Resolve or close all conversations with this contact first, then try deleting again.

General Issues

Problem	Possible Cause	Solution
CRM is slow	Internet connection or browser issue	Check your internet speed. Clear your browser cache. Close other tabs. Try a different browser (Chrome recommended).
Dashboard numbers not updating	Data refresh delay	Dashboard data refreshes every 15 minutes. Click the refresh icon on the dashboard to force an update.
Cannot find a feature	Feature may be on a higher plan	Check the feature comparison table in Section 22. Some features are only available on

Problem	Possible Cause	Solution
Notifications not working	Browser notifications blocked	Professional or Business plans. Check your browser settings and allow notifications from crm.marketing4effect.com.
Export not downloading	Pop-up blocker	Disable your browser's pop-up blocker for crm.marketing4effect.com, or check your Downloads folder.
Dark theme too dark	—	Try a different theme in Settings → Appearance. There are 6 dark themes with different color temperatures. You can also switch to Light mode.
Keyboard shortcuts not working	Focus may be in a text field	Click outside any text field first, then try the shortcut. See Appendix N for all shortcuts.

When to Contact Support

Contact M4E support if: - Your issue is not listed in the tables above - You tried the solution but it did not work - You see an error message you do not understand - Your WhatsApp connection keeps disconnecting repeatedly - You suspect a security issue (unauthorized access, data breach) - You need help with billing or plan changes - You want to request a new feature

See Section 24 for how to contact support.

Section 24: Getting Help

Help Page Contents

The CRM has a built-in Help page accessible from the sidebar (the question mark icon). The Help page includes:

Section	What It Contains
Getting Started	Quick start guide, first steps, video tutorials

Section	What It Contains
FAQ	Answers to the 40 most common questions
Feature Guides	Detailed guides for each CRM feature
Video Tutorials	Step-by-step video walkthroughs
Campaign Guides	How to set up and optimize each campaign template
Best Practices	Tips for getting the most out of the CRM
What's New	Latest features and updates
API Documentation	For developers (Business plan only)
Community	Tips and strategies from other M4E users
Contact Support	Direct link to reach the M4E team

Contacting the M4E Team

You can reach us through several channels:

Channel	How to Reach Us	Best For
In-App Chat	Click the chat icon in the bottom-right corner of the CRM	Quick questions, minor issues
Email	support@marketing4effect.com	Detailed issues, feature requests, billing questions
WhatsApp	Message our support number (provided in your welcome email)	Urgent issues, quick questions
Phone	Call our support line (provided in your welcome email)	Critical issues that need immediate attention
Help Page	Click  in the sidebar → Contact Support	General inquiries

Response Times

Priority	Description	Response Time
Critical	CRM is completely down, cannot send any messages, security breach	Within 1 hour
High	Major feature not working, WhatsApp disconnected, campaign stuck	Within 4 hours
Medium	Minor feature issue, question about settings, import help	Within 24 hours
Low	Feature request, general question, feedback	Within 48 hours

Business plan customers get **Priority Support** with faster response times and a **dedicated account manager** who knows your business.

Business Hours

Day	Hours (WAT)
Monday - Friday	9:00 AM - 6:00 PM
Saturday	9:00 AM - 1:00 PM
Sunday	Closed
Public Holidays	Closed (emergency support available for Business plan)

Messages sent outside business hours will be responded to on the next business day. For critical issues outside business hours, Business plan customers can use the emergency support line.

Tips for Getting Help Faster

1. **Be specific** — Instead of “it’s not working”, say “When I click ‘Send Broadcast’, I get an error message that says ‘Template not approved’.”
2. **Include screenshots** — A picture is worth a thousand words. Take a screenshot of the error and attach it to your message.
3. **Share your browser** — Tell us which browser you are using (Chrome, Firefox, Safari, etc.) and whether you are on mobile or desktop.

4. **Try the troubleshooting table first** — Check Section 23 before contacting support. Many issues have simple solutions.
 5. **Include your account email** — So we can look up your account quickly.
-

Section 25: Glossary

Here are the key terms used in this guide and in the CRM, explained in simple language:

Term	What It Means
Active Contact	A customer who has interacted with your business recently (within the last 30 days by default)
Admin	A team member role with almost full access to the CRM (cannot manage billing)
Agent	A team member role that can view and respond to conversations but cannot change settings
API	Application Programming Interface — a way for other software to connect to the CRM (Business plan)
Automation	A rule that automatically performs an action when something happens (e.g., send a message when a new contact is added)
Branch	A physical location of your business (e.g., Lekki branch, Ikeja branch)
Broadcast	A single message sent to many contacts at once (like a mass text)
Campaign	A series of automated messages sent over time to achieve a specific goal (e.g., win back dormant customers)
Cart Abandonment	When a customer adds items to their online shopping cart but leaves without buying
Channel	

Term	What It Means
	The communication method used (WhatsApp, Email, or SMS)
Contact	A customer or potential customer stored in your CRM
Conversion	When a customer takes the desired action (makes a purchase, books an appointment, etc.)
Conversion Rate	The percentage of people who take the desired action out of all people who received the message
CRM	Customer Relationship Management — a system for managing customer interactions and data
CSV	Comma-Separated Values — a simple file format for spreadsheet data, used for importing contacts
CTWA	Click-to-WhatsApp — a type of Facebook/Instagram ad that opens a WhatsApp chat when clicked
Custom Field	An extra data field you create to store specific information about contacts (e.g., “Favourite Colour”)
Dashboard	The main screen of the CRM showing your key numbers and metrics at a glance
Deal	A potential sale or transaction being tracked in your pipeline
Dormant Customer	A customer who has not interacted with your business for an extended period
Drip Campaign	A campaign that sends messages gradually over time (like water dripping)
E-commerce	Selling products online through a website (e.g., Shopify, WooCommerce)
Flow	An interactive form or menu inside WhatsApp (WhatsApp Flows technology)

Term	What It Means
Frequency (RFM)	How often a customer buys from you — part of the RFM scoring system
Handoff	When the AI chatbot transfers a conversation to a human team member
Import	Bringing data into the CRM from an external source (e.g., uploading a CSV file of contacts)
Inbox	The section of the CRM where you read and reply to WhatsApp messages
Integration	Connecting the CRM to another service (e.g., Shopify, Facebook Ads)
Kanban	A visual board with columns representing stages (used in the Pipeline feature)
Knowledge Base	The collection of questions and answers that teaches the AI chatbot about your business
Lead	A potential customer who has shown interest but has not yet made a purchase
Loyalty Program	A system that rewards customers for repeat purchases (points, tiers, rewards)
Monetary (RFM)	How much money a customer spends — part of the RFM scoring system
NDPR	Nigeria Data Protection Regulation — the law governing how businesses handle customer data in Nigeria
Nurture Sequence	A series of messages designed to build a relationship with a lead until they are ready to buy
Open Rate	The percentage of messages that were read by recipients
Opt-out	When a customer asks to stop receiving messages from you (you must respect this)

Term	What It Means
Owner	The team member role with full access to everything in the CRM, including billing
Pipeline	A visual representation of your sales process, showing deals at different stages
QR Code	A square barcode that customers scan with their phone to open a WhatsApp chat with you
Quick Reply	A pre-written message you can send with one click (saves time on common responses)
Recency (RFM)	How recently a customer last bought from you — part of the RFM scoring system
Referral	When an existing customer recommends your business to someone new
Response Rate	The percentage of message recipients who replied
RFM Score	A combined score (Recency + Frequency + Monetary) that measures customer value (0-15)
ROI	Return on Investment — how much money you made compared to how much you spent
Satisfaction Gating	Checking if a customer is happy before asking them for a public review
Segment	A group of contacts that share common characteristics (e.g., “VIP customers in Lagos”)
Sentiment	The emotional tone of a customer’s message (positive, neutral, or negative)
Sentiment Analysis	AI technology that detects whether a customer is happy, neutral, or unhappy
Shopify	A popular e-commerce platform for creating online stores
SMS	Short Message Service — text messages sent to phone

Term	What It Means
	numbers (coming soon to the CRM)
Tag	A label you attach to contacts to organize them (e.g., “VIP”, “New Customer”, “Lekki”)
Template	A pre-approved message format required by WhatsApp for business-initiated conversations
Tier	A level or category. Campaign tiers (1, 2, 3) determine which plans include which campaigns. Loyalty tiers (Bronze, Silver, Gold, Platinum) reward customer spending levels.
Trigger	The event that starts an automation (e.g., “new contact added” triggers a welcome message)
Viewer	A team member role that can only view information but cannot make changes
WAT	West Africa Time — the timezone used in Nigeria (UTC+1)
WhatsApp Business API	The official WhatsApp system for businesses to send messages at scale
WhatsApp Cloud API	Meta’s cloud-hosted version of the WhatsApp Business API (used by the M4E CRM)
Win-Back	The process of re-engaging dormant customers and getting them to buy again
WooCommerce	A popular e-commerce plugin for WordPress websites

APPENDICES

Appendix A: Quick Start Checklist (First 30 Minutes)

Complete these 15 steps in your first session to get your CRM up and running:

#	Task	Time	Done?
1	Log in at crm.marketing4effect.com	1 min	☐
2	Update your business profile (name, email, phone, address)	3 min	☐
3	Set your timezone to West Africa Time (WAT)	1 min	☐
4	Set your currency to Nigerian Naira (₦)	1 min	☐
5	Check your WhatsApp connection status (should be green)	1 min	☐
6	Add your first 5 contacts manually (your best customers)	5 min	☐
7	Create 3 tags for organizing contacts (e.g., "VIP", "New", "Regular")	2 min	☐
8	Send a test message to yourself via WhatsApp	1 min	☐
9	Set up 3 quick replies for common responses	3 min	☐
10	Add 5 FAQ entries to the AI Knowledge Base (if on Professional/Business plan)	5 min	☐
11	Create your first QR code for your shop or business card	2 min	☐
12	Explore the Campaign Gallery and read about the Win-Back Campaign	2 min	☐
13	Invite one team member (if applicable)	2 min	☐
14	Bookmark crm.marketing4effect.com in your browser	1 min	☐
15		—	☐

#	Task	Time	Done?
	Prepare your customer CSV file for import (you can import later)		

Total estimated time: 30 minutes

After completing this checklist, you are ready to start using the CRM for daily customer communication. Your next step should be importing your full customer list (see Appendix G) and launching your first campaign (see Appendix C).

Appendix B: Campaign Template Quick Reference Card

A quick-glance reference for all 14 campaign templates:

#	Campaign Name	Tier	Category	What It Does	Best For	Plan Requirements
1	Win Back Dormant	Tier 1	Reactivation	Brings back inactive customers with 3-message sequence	Any business with dormant customers	All plans
2	Birthday & Anniversary	Tier 1	Engagement	Sends birthday wishes with exclusive discounts	Any business collecting birthdays	All plans
3	Post-Purchase Follow-Up	Tier 1	Retention	Thanks customers and asks for reviews	Every business	All plans
4	VIP Exclusive Offers	Tier 1	Growth	Rewards top 20% customers with exclusive treatment	Any business wanting to retain top customers	All plans
5	Cart Abandonment	Tier 2	Recovery	Reminds customers to complete online purchases	Businesses with Shopify/WooCommerce stores	Professional
6			Growth		Any business	Professional

#	Campaign Name	Tier	Category	What It Does	Best For	Plan Requirements
	Seasonal Promotions	Tier 2		Pre-built templates for Nigerian holidays		
7	Referral Program	Tier 2	Growth	Turns happy customers into recruiters	Any business wanting word-of-mouth growth	Professional
8	Feedback Collection	Tier 2	Engagement	Satisfaction-gated feedback and review collection	Any business wanting more reviews	Professional
9	New Product Launch	Tier 2	Growth	Teaser → Launch → Early bird offer sequence	Businesses launching new products/services	Professional
10	Loyalty Program	Tier 2	Retention	Digital points and tier-based rewards system	Businesses wanting repeat purchases	Professional
11	WhatsApp Survey Forms	Tier 3	Engagement	Interactive in-chat surveys and forms	Businesses needing structured data collection	Business
12	Product Catalog Browse	Tier 3	Growth	In-chat product browsing experience	Businesses with product catalogs	Business
13	Ad Lead Nurturing	Tier 3	Growth	Auto-nurture for Click-to-WhatsApp ad leads	Businesses running Facebook/Instagram ads	Business
14	Unhappy Customer Recovery	Tier 3	Retention	AI-detected sentiment → auto-recovery process	Any business wanting to prevent customer loss	Business

Appendix C: Win-Back Campaign Walkthrough

This is a complete, step-by-step guide to launching your first Win-Back Campaign.

Before You Start

Make sure you have:

- At least 20 contacts in your CRM
- Some contacts who have not purchased in 60+ days (these are your dormant customers)
- A discount or offer you are willing to give (e.g., 10-20% off)

Step 1: Open the Campaign Gallery

1. Click **Campaigns** in the sidebar menu (the target icon )
2. You will see the Campaign Gallery with all available templates
3. Find **“Win Back Dormant Customers”** — it has a  icon and a “Reactivation” badge
4. Click on it

Step 2: Review the Analysis

The CRM will analyze your contacts and show you:

- **“You have [X] dormant customers”** — This is how many customers have not purchased in 60+ days
- **“Estimated reach: [X] contacts”** — How many will receive the campaign
- **“Potential revenue recovery: \$[X]”** — Estimated revenue if the campaign succeeds
- **“Recommended timing: [day/time]”** — Best time to start based on your data

If the numbers look good, click **“Continue”**.

Step 3: Choose Your Audience

You can refine who receives the campaign:

- **All dormant customers** (recommended for your first campaign)
- **By tag** — Only dormant customers with specific tags
- **By branch** — Only dormant customers from a specific branch
- **By RFM score** — Only dormant customers above a certain value score

For your first campaign, select **“All dormant customers”** and click **“Continue”**.

Step 4: Customize Your Messages

You will see 3 pre-written messages. Customize each one:

Message 1 (Day 1 — The Reconnection): > Edit the template to include your business name, what is new, and a warm greeting. Keep it friendly and personal.

Message 2 (Day 3 — The Offer): > Edit to include your specific discount or offer. Make it compelling but sustainable for your business.

Message 3 (Day 5 — The Urgency): > Edit to add a deadline for the offer. Create genuine urgency.

For each message, you can: - Edit the text - Add an image (product photo, menu, etc.) - Change the call-to-action button text - Preview how it will look on WhatsApp

Click **“Continue”** when all 3 messages are ready.

Step 5: Schedule the Campaign

Choose when to start:

- **Start immediately** — Campaign begins right now
- **Schedule for later** — Pick a date and time

Recommended: Schedule for a Tuesday or Wednesday morning at 10:00 AM. These are the best days and times for WhatsApp engagement in Nigeria.

Click **“Continue”**.

Step 6: Review and Launch

You will see a summary: - Campaign name - Number of recipients - Message previews (all 3) - Schedule - Estimated cost (if any)

Review everything carefully. When you are satisfied, click **“Launch Campaign”**.

Checking Your Results

After the campaign runs for at least 5 days (to complete all 3 messages):

1. Go to **Campaigns** in the sidebar

2. Click on your Win-Back Campaign
3. You will see the results dashboard:

Metric	What to Look For
Messages Sent	Should match your target audience size
Open Rate	80%+ is good for WhatsApp
Response Rate	15%+ is good for a win-back campaign
Conversions	Number of customers who made a purchase
Revenue Recovered	Total ₦ earned from reactivated customers
Win-Back Rate	% of dormant customers who came back (15-25% is excellent)

Real-World Example with Numbers

Mama Nkechi's Kitchen — First Win-Back Campaign:

- **Dormant customers:** 350 (no order in 60+ days)
- **Offer:** 15% off any order over ₦3,000
- **Schedule:** Tuesday 10:00 AM

Results after 5 days:

Metric	Message 1 (Day 1)	Message 2 (Day 3)	Message 3 (Day 5)	Total
Sent	350	308	273	931
Read	298 (85%)	267 (87%)	231 (85%)	796
Replied	42	35	18	95
Purchased	28	45	22	95
Revenue	₦210,000	₦337,500	₦165,000	₦712,500

Win-back rate: $95/350 = 27\%$ (excellent!) **Revenue recovered:** **₦712,500** from customers who would have been lost **Cost of discounts given:** ~₦106,875 (15% of ₦712,500) **Net revenue recovered:** **₦605,625**

Appendix D: Birthday Campaign Walkthrough

Before You Start

You need customer birthdays in your CRM. Here is how to collect them:

1. **Add a “Birthday” custom field:** Go to Settings → Custom Fields → Create a Date field called “Birthday”
2. **Ask customers directly:** “When is your birthday? We have a special surprise for our customers on their birthday! ”
3. **Add to your intake form:** If you have a registration form, add a birthday field
4. **Import from spreadsheet:** If you already have birthdays in a spreadsheet, include them in your CSV import
5. **Run a birthday collection campaign:** Send a broadcast asking customers to share their birthday

Setting Up the Birthday Campaign

1. Go to **Campaigns** → Find “**Birthday & Anniversary Messages**” (icon)
2. Click on it → The CRM shows how many contacts have birthdays recorded
3. Click “**Continue**”

Customize Your Birthday Message

Edit the template to match your business:

Example for GlowUp Salon: > “ Happy Birthday, {first_name}! > > Everyone at GlowUp Salon wishes you a fabulous birthday! > > As our gift to you, enjoy **25% OFF** any treatment this week. > > Use code: BDAY-{first_name} > Valid for 7 days from today > > Book now: Reply BOOK or call 0801-234-5678 > > Have an amazing day! ”

How It Works After Setup

Once activated, the campaign runs automatically every day: - At 8:00 AM (or your chosen time), the CRM checks for birthdays - Any contact whose birthday is today receives the birthday message - 3 days later, if they have not used the discount, they get a reminder - You do not need to do anything — it runs forever until you stop it

GlowUp Salon Birthday Campaign Results (3 Months)

Month	Birthdays Sent	Appointments Booked	Revenue	Avg Spend
Month 1	22	16 (73%)	₦360,000	₦22,500
Month 2	24	17 (71%)	₦382,500	₦22,500
Month 3	21	15 (71%)	₦337,500	₦22,500
Total	67	48 (72%)	₦1,080,000	₦22,500

Normal average spend per visit is ₦15,000. Birthday customers spend ₦22,500 — that is **50% more** than usual because they treat themselves on their birthday.

Pro Tip: The more birthdays you collect, the more revenue this campaign generates. Make birthday collection a priority — aim to have birthdays for at least 50% of your contacts.

Appendix E: Cart Abandonment Campaign Walkthrough

Requirements

- Professional or Business plan
- Shopify or WooCommerce store connected (see Section 14)
- E-commerce integration active and syncing

Setting Up Cart Abandonment Recovery

1. Go to **Campaigns** → Find **“Cart Abandonment Recovery”** (icon)
2. Click on it
3. The CRM checks your e-commerce connection:
 - **Connected:** You can proceed
 - **Not connected:** You will be directed to Settings → Integrations to connect your store first
4. Click **“Continue”**

Customize Your Recovery Messages

Message 1 — Gentle Nudge (1 hour after abandonment): > “Hi {first_name}! > > You left some items in your cart at Bella’s Boutique: > > {cart_items_list} > > Your items are waiting for you! Complete your order here: {cart_link} > > Need help? Just reply to this message! ”

Message 2 — Incentive (24 hours after abandonment): > “Still thinking about it, {first_name}? > > We get it — sometimes you need a little time. Here’s a little nudge: > > Use code **COMEBACK10** for **10% off** your cart! > > {cart_items_list} > Total: {cart_total} > With discount: {discounted_total} > > Complete your order: {cart_link} > > Offer valid for 48 hours ”

Message 3 — Urgency (72 hours after abandonment): > “Last chance, {first_name}! > > Your cart items at Bella’s Boutique are selling fast: > > {cart_items_list} > > Your **10% discount** expires tonight! > > Don’t miss out: {cart_link} > > After today, these items may no longer be available at this price.”

Bella’s Boutique Cart Recovery Results (1 Month)

Week	Abandoned Carts	Recovered	Recovery Rate	Revenue Recovered
Week 1	45	11	24%	₦330,000
Week 2	52	10	19%	₦310,000
Week 3	38	9	24%	₦285,000
Week 4	41	9	22%	₦325,000
Total	176	39	22%	₦1,250,000

Without this campaign, that ₦1,250,000 would have been completely lost.

Appendix F: Broadcast Messaging Walkthrough

The 4-Step Broadcast Process

Step 1: Choose Your Channel

1. Click **Broadcasts** in the sidebar (the megaphone icon)
2. Click “+ New Broadcast”
3. Select your channel:
 - **WhatsApp** (recommended — highest open rates in Nigeria)

- **Email** (good for longer content with images)
- **SMS** (coming soon)

Step 2: Write Your Message

You have two options:

Option A: Use a Template 1. Click “**Choose Template**” 2. Browse your approved templates 3. Select one and customize the variable fields (name, offer, date, etc.)

Option B: Write a New Message 1. Click “**Write Message**” 2. Type your message in the editor 3. Use the formatting tools (bold, italic, emoji) 4. Add an image, document, or video if needed 5. Use **{first_name}** to personalize with the customer’s name

Step 3: Choose Your Audience

Select who receives the broadcast:

Option	What It Does	When to Use
All contacts	Sends to everyone	Major announcements, holiday greetings
By tag	Sends to contacts with specific tags	Targeted promotions (e.g., only “VIP” customers)
By status	Sends to contacts with specific recency status	Win-back messages to dormant customers
By branch	Sends to contacts at a specific branch	Branch-specific promotions
By segment	Sends to a saved segment	Highly targeted campaigns
Custom filter	Combine multiple filters	Advanced targeting

Step 4: Schedule or Send

- **Send Now** — Broadcast goes out immediately
- **Schedule** — Pick a date and time for the broadcast to be sent

Best times to send broadcasts in Nigeria:

Day	Best Times	Why
Tuesday	10:00 AM - 12:00 PM	People are settled into the work week

Day	Best Times	Why
Wednesday	10:00 AM - 12:00 PM	Mid-week, good engagement
Thursday	4:00 PM - 7:00 PM	People planning for the weekend
Friday	10:00 AM - 12:00 PM	Pre-weekend shopping mood
Saturday	9:00 AM - 11:00 AM	Weekend relaxation, browsing time

Avoid: Monday mornings (people are busy), Sunday evenings (low engagement), late nights (after 9 PM).

Mama Nkechi's Daily Specials Broadcast Example

Every morning at 9:00 AM, Mama Nkechi sends a broadcast to her "Regular Customers" tag:

"Good morning!

Today's specials at Mama Nkechi's Kitchen:

Ofe Nsala (White Soup) with Pounded Yam — ₦2,500
Suya Chicken with Jollof Rice — ₦2,000 **Grilled Tilapia**
 with Fried Plantain — ₦3,000

Available 12pm - 8pm 15 Adeniran Ogunsanya St,
 Surulere Delivery available within Surulere (₦500)

Reply ORDER to place your order! Reply MENU for full menu"

She schedules this broadcast the night before, so it goes out automatically at 9:00 AM while she is preparing the kitchen.

Result: Average 45 orders per day from the broadcast (up from 25 before using the CRM). Daily revenue increased by ₦40,000-₦60,000.

Appendix G: Contact Import Walkthrough

Preparing Your Spreadsheet

Before importing, your spreadsheet (Excel or Google Sheets) needs to be formatted correctly.

Required columns:

Column Name	Required?	Format	Example
first_name	Yes	Text	Chioma
last_name	Recommended	Text	Okafor
phone	Yes	+234 format	+2348012345678
email	Optional	Email	chioma@email.com
tags	Optional	Comma-separated	VIP, Lagos, Regular
birthday	Optional	YYYY-MM-DD	1990-05-15
branch	Optional	Text (must match branch name)	Lekki
notes	Optional	Text	Prefers morning appointments

Phone Number Formatting

This is the most common source of import errors. Nigerian phone numbers must be in international format:

Original Format	Correct Format	Notes
08012345678	+2348012345678	Remove leading 0, add +234
0812 345 6789	+2348123456789	Remove spaces and leading 0, add +234
234-801-234-5678	+2348012345678	Remove dashes, add +
+2348012345678	+2348012345678	Already correct!
8012345678	+2348012345678	Add +234

Pro Tip: In Excel or Google Sheets, you can use this formula to fix phone numbers: `= "+234"&RIGHT(SUBSTITUTE(A2, " ", ""), 10)` — This takes the last 10 digits and adds +234.

Date Formatting

Birthdays and dates must be in **YYYY-MM-DD** format:

Original	Correct	Notes
15/05/1990	1990-05-15	Day/Month/Year → Year-Month-Day
May 15, 1990	1990-05-15	Text → Year-Month-Day
05-15-90	1990-05-15	Use full 4-digit year

Step-by-Step Import

1. **Save your spreadsheet as CSV:** In Excel, go to File → Save As → Choose “CSV (Comma delimited)” format. In Google Sheets, go to File → Download → Comma-separated values (.csv)
2. **Go to Contacts** in the CRM sidebar
3. Click **“Import”** button (the upload icon)
4. Click **“Choose File”** and select your CSV file
5. The CRM will show a **preview** of your data with column mapping:
 - It will try to automatically match your columns to CRM fields
 - If a column is not matched, click the dropdown and select the correct field
 - If a column should be skipped, select “Skip this column”
6. Click **“Validate”** — The CRM checks for errors:
 - Green rows: Ready to import
 - Yellow rows: Warnings (e.g., missing optional fields) — will still import
 - Red rows: Errors (e.g., invalid phone number) — will NOT import
7. Fix any red errors if possible, or click **“Import Valid Rows”** to import only the green and yellow rows
8. Wait for the import to complete (progress bar shown)
9. You will see a summary: “X contacts imported, Y skipped, Z errors”

Common Import Errors and Fixes

Error	Cause	Fix
“Invalid phone number”	Phone not in +234 format	Fix the phone number format (see table above)

Error	Cause	Fix
"Duplicate contact"	Phone number already exists in CRM	The existing contact will be updated with new data (not duplicated)
"Invalid date format"	Birthday not in YYYY-MM-DD format	Fix the date format
"File too large"	CSV file exceeds size limit	Split into smaller files (500 contacts per file)
"Invalid CSV format"	File is not a proper CSV	Re-save from Excel/Google Sheets as CSV
"Missing required field"	No phone number in a row	Add the phone number or remove the row
"Encoding error"	Special characters in the file	Save the CSV with UTF-8 encoding

Appendix H: Pipeline Setup Walkthrough

Creating a Pipeline

1. Click **Pipeline** in the sidebar (the kanban icon)
2. If this is your first time, you will see the default pipeline with stages: Data Import → Segmentation → Campaign Active → Follow-up → Won Back → Lost
3. To create a new pipeline, click **" + New Pipeline "**
4. Enter a name (e.g., "Delivery Contracts", "Course Enrollments", "Salon Bookings")
5. Click **"Create"**

Adding and Editing Stages

1. In your pipeline, click **" + Add Stage "**
2. Enter the stage name (e.g., "Inquiry", "Quote Sent", "Negotiation", "Won", "Lost")
3. Choose a color for the stage
4. Set the stage order (drag to reorder)
5. Click **"Save"**

You can have up to 10 stages per pipeline.

Creating Deals

1. Click “+ New Deal” in any stage column
2. Fill in:
 - **Deal Name** — A short description (e.g., “Chioma’s Wedding Delivery”)
 - **Contact** — Link to an existing contact
 - **Value** — The deal amount in ₦
 - **Expected Close Date** — When you expect to close this deal
 - **Notes** — Any additional information
 - **Branch** — Which branch owns this deal (if applicable)
3. Click “Create Deal”

The deal appears as a card in the stage column.

Moving Deals

As a deal progresses, move it to the next stage: - **Drag and drop**
— Click and drag the deal card to the next column - **Click to edit**
— Open the deal and change the stage from the dropdown

SwiftMove Logistics Pipeline Example

SwiftMove created a pipeline called “Delivery Contracts” with these stages:

Stage	Color	What It Means	Example Deals
Inquiry	Blue	Customer asked for a quote	“Ade’s Office Move — Lekki to VI”
Quote Sent	Yellow	We sent them a price quote	“Bella’s Boutique — Weekly Deliveries”
Negotiation	Orange	Discussing terms and pricing	“TechHub — Equipment Delivery”
Won	Green	Customer accepted, contract signed	“Mama Nkechi — Daily Catering Delivery”
Lost	Red	Customer chose a competitor or cancelled	“ABC Corp — Cancelled”

How SwiftMove uses it: - Every new delivery inquiry creates a deal in the “Inquiry” stage - The sales team sends quotes and moves deals to “Quote Sent” - After negotiation, deals move to “Won” or “Lost” - The pipeline dashboard shows: 12 deals in Inquiry (¥2.4M), 8 in Quote Sent (¥1.8M), 3 in Negotiation (¥950K), total pipeline value: ¥5.15M

This gives SwiftMove’s owner a clear picture of upcoming revenue and where deals are getting stuck.

Pro Tip: If many deals are stuck in “Quote Sent” for more than 3 days, set up an automation to send a follow-up message automatically.

Appendix I: AI Chatbot Setup Walkthrough

This walkthrough helps you set up your AI chatbot so it can answer customer questions when you are not available.

Requirements

- Professional plan (basic chatbot, 100 messages/month) or Business plan (full chatbot, unlimited)
- At least 10 FAQ entries to start

Step 1: Open the AI Chatbot Settings

1. Click **AI Chatbot** in the sidebar (the robot icon)
2. You will see the chatbot dashboard with:
 - **Status:** ON or OFF
 - **Messages this month:** How many AI messages have been sent
 - **Knowledge Base:** How many FAQ entries you have
 - **Conversation Logs:** Recent AI conversations

Step 2: Add Your First 10 FAQ Entries

Click “**Knowledge Base**” tab, then “**+ Add Entry**” for each FAQ:

#	Question	Answer	Category
1	What are your opening hours?	We are open Monday to Saturday, 9am to 7pm. We are closed on Sundays and	General

#	Question	Answer	Category
		public holidays.	
2	Where are you located?	We are at [your address]. You can find us on Google Maps here: [link]	General
3	What services do you offer?	We offer [list your main services/products]. Visit our website for the full list: [link]	Services
4	How much does [main service] cost?	Our [main service] starts from ₦[price]. Prices vary depending on [factors]. Contact us for a custom quote.	Pricing
5	Do you deliver?	Yes, we deliver within [area]. Delivery fee is ₦[amount]. Free delivery for orders above ₦ [amount].	Delivery
6	How do I place an order?	You can order by: 1) Replying to this chat with your order, 2) Calling [phone], 3) Visiting our website [link]	Orders
7	Do you accept bank transfer?	Yes! Transfer to [Bank Name], Account: [number],	Payment

#	Question	Answer	Category
8	Can I get a refund?	Name: [name]. Send your receipt here after payment. We offer refunds within [X] days of purchase. Please contact us with your receipt and reason for the refund.	Policy
9	Do you have a loyalty program?	Yes! Earn points with every purchase. Ask us about our loyalty program for details and rewards.	Loyalty
10	How can I speak to a human?	Type HUMAN or AGENT at any time and a team member will take over the conversation.	Support

For each entry: 1. Click “+ Add Entry” 2. Type the **question** (or multiple variations of the same question) 3. Type the **answer** 4. Select a **category** (or create a new one) 5. Click “Save”

Step 3: Configure Chatbot Behavior

Go to the “Settings” tab within the AI Chatbot section:

Setting	Recommended Value	What It Does
Active Hours	“After business hours only” or “Always”	When the chatbot responds automatically
Greeting Message	“Hi! I’m the [Business Name]”	First message customers see

Setting	Recommended Value	What It Does
	assistant. How can I help you today?"	
Handoff Trigger	"HUMAN" or "AGENT"	What customers type to reach a human
Confidence Threshold	70%	How sure the AI must be before answering (lower = answers more, higher = more accurate)
Language	"English + Nigerian Pidgin"	Languages the chatbot understands
Fallback Message	"I'm not sure about that. Let me connect you with a team member who can help!"	What the chatbot says when it does not know the answer

Step 4: Test Your Chatbot

1. Click the **"Test"** button in the chatbot dashboard
2. A test chat window opens
3. Try asking questions from your FAQ list
4. Check that the answers are correct and natural
5. Try asking something NOT in your FAQ to see the fallback message
6. Try typing "HUMAN" to test the handoff

Step 5: Turn It On

1. Toggle the chatbot status to **ON**
2. Choose when it should be active:
 - **Always** — AI responds to all messages first, hands off to humans when needed
 - **After hours only** — AI only responds outside your business hours
 - **When no agents online** — AI responds only when no team members are logged in

Expanding Over Time

Start with 10 entries and add more as you notice patterns:

1. Check **Conversation Logs** weekly

2. Look for questions the chatbot could not answer
3. Add those questions and answers to the Knowledge Base
4. After 1 month, you should have 30-50 entries
5. After 3 months, aim for 100+ entries for comprehensive coverage

Checking Conversation Logs

1. Go to **AI Chatbot** → “**Conversation Logs**” tab
2. You will see a list of all AI conversations with:
 - Customer name
 - Date and time
 - Number of messages
 - Whether it was resolved by AI or handed off to a human
 - Customer satisfaction (if rated)
3. Click any conversation to read the full transcript
4. Look for:
 - Wrong answers (edit the FAQ entry)
 - Unanswered questions (add new FAQ entries)
 - Good answers (the chatbot is working well!)

Example: Mama Nkechi’s After-Hours Chatbot

Mama Nkechi’s Kitchen closes at 8 PM, but customers often message at night asking about tomorrow’s menu, prices, and delivery options. Before the chatbot, these messages went unanswered until the next morning — and many customers ordered from competitors instead.

After setting up the chatbot: - The chatbot answers questions about the menu, prices, location, and delivery from 8 PM to 9 AM
- It takes pre-orders for the next day: “I’d love to help you order! Here’s tomorrow’s menu: [menu]. Reply with your order and we’ll have it ready for you!” - If a customer has a complaint or complex question, the chatbot says: “I want to make sure you get the best help. Mama Nkechi will personally respond to you first thing tomorrow morning at 9 AM. ”

Results after 1 month: - 340 after-hours conversations handled by AI - 78% resolved without human intervention - 45 pre-orders taken overnight (₦135,000 in revenue that would have been lost) - Customer satisfaction: 4.2/5 for AI interactions

Appendix J: QR Code Creation Walkthrough

Step-by-Step QR Code Creation

- 1. Click **QR Codes** in the sidebar (the QR icon)
- 2. Click **+ Create QR Code**
- 3. Fill in the details:

Field	What to Enter	Example
Name	A name for this QR code (for your reference)	"Shop Counter QR"
Welcome Message	Pre-filled message when customer scans	"Hi! I just visited your shop"
Tag	Auto-tag contacts who scan this QR	"Walk-in", "Lekki Branch"
Style	Choose a design style	Classic, Rounded, Branded
Color	QR code color	Your brand color
Logo	Add your business logo in the center	Upload your logo

- 1. Click **"Generate QR Code"**
- 2. Preview the QR code on screen
- 3. Click **"Download"** to save it

Download Options

Format	Best For
PNG (High Resolution)	Printing on flyers, posters, banners
SVG (Vector)	Professional printing, business cards, large format
PDF	Easy sharing and printing on standard paper

Where to Place QR Codes

Location	Why It Works	Example
Shop counter / Reception	Customers can scan while waiting	GlowUp Salon has a framed QR code at reception

Location	Why It Works	Example
Receipts	Customers scan after purchase for follow-up	Mama Nkechi prints QR on every receipt
Business cards	Easy way to start a WhatsApp chat	SwiftMove adds QR to all business cards
Flyers / Brochures	Converts print marketing to digital conversations	Bella's Boutique adds QR to fashion lookbooks
Shop window	Attracts walk-by traffic even when closed	"Scan to chat with us on WhatsApp!"
Product packaging	Post-purchase engagement and support	"Scan for care instructions and support"
Social media	Converts followers to WhatsApp contacts	Post QR code image on Instagram stories
Event banners	Captures leads at events and exhibitions	TechHub uses QR at tech meetups
Vehicle branding	Mobile advertising with instant contact	SwiftMove has QR on all delivery vehicles
Email signatures	Easy WhatsApp access from email	Add QR to your email footer

QR Code Templates

The CRM includes pre-designed QR code templates:

1. **"Chat With Us"** — Simple, clean design with WhatsApp icon
2. **"Scan for Menu"** — Restaurant-themed with food icons
3. **"Book Now"** — Appointment-focused with calendar icon
4. **"Get a Quote"** — Business-focused with price tag icon
5. **"Join Our VIP List"** — Exclusive feel with star icon
6. **"Leave a Review"** — Feedback-focused with star rating icon

Example: GlowUp Salon Reception QR Code

GlowUp Salon created a QR code for their reception area:

- **Name:** "Lekki Reception QR"
- **Welcome Message:** "Hi GlowUp! I'm at your Lekki salon"
- **Tags:** "Walk-in", "Lekki"
- **Style:** Branded with GlowUp logo in center

- **Placement:** Framed on the reception desk with a small sign:
“Scan to join our VIP list and get 10% off your next visit!”

Results in 1 month: - 89 new contacts from QR scans - 67 of those (75%) booked a return appointment - 23 joined the loyalty program - Average: 3 new QR contacts per day

Appendix K: Team Member Invitation Walkthrough

Step-by-Step Invitation Process

1. Go to **Settings** → **Team** tab
2. Click “+ **Invite Team Member**”
3. You will see the invitation form:

Fill in these fields:

Field	What to Enter	Example
Email	The person’s email address	amaka@bellaboutique.com
First Name	Their first name	Amaka
Last Name	Their last name	Obi
Role	Select from dropdown	Agent
Branch	Select their branch (if applicable)	Lagos

1. Click “**Send Invitation**”
2. You will see a confirmation: “Invitation sent to amaka@bellaboutique.com”

Role Selection Guide

Use this guide to choose the right role:

If this person is...	Give them this role	Why
Your business partner	Admin	They need full management access
Your operations manager	Admin	They manage daily operations and team
	Agent	

If this person is...	Give them this role	Why
A sales representative	Agent	They need to chat with customers and manage deals
A customer service rep		They need to respond to messages and update contacts
A receptionist	Agent	They need to handle incoming inquiries
Your accountant	Viewer	They only need to see reports and revenue data
An external consultant	Viewer	They need to observe but not change anything
A trainee / intern	Viewer	They can learn by observing before getting Agent access

What the Invited Person Sees

1. They receive an email with subject: "You've been invited to [Business Name] on M4E CRM"
2. The email contains:
 - Your business name
 - Their assigned role
 - A **"Join Team"** button
3. When they click the button, they are taken to a page where they:
 - Create a password
 - Optionally add a profile photo
 - Accept the terms of use
4. After completing setup, they are logged into the CRM with their assigned role
5. They see only the features their role allows (see permissions table in Section 20)

If the Invitation Expires

Invitation links expire after **7 days**. If the person did not accept in time:

1. Go to **Settings** → **Team** tab
2. Find the pending invitation (it will show "Pending" status)

3. Click the **three dots** (:) next to their name
4. Click **“Resend Invitation”**
5. A new email with a fresh link is sent

Troubleshooting Invitations

Problem	Solution
Person says they did not receive the email	Ask them to check their spam/junk folder. Resend the invitation.
“Invalid invitation” error	The link may have expired. Resend the invitation.
Person cannot log in after accepting	Make sure they are using the email address the invitation was sent to.
Wrong role assigned	Go to Settings → Team, click the three dots next to their name, click “Change Role”.

Appendix L: WhatsApp Message Templates Guide

What Are Templates and Why Are They Needed?

WhatsApp requires businesses to use **pre-approved message templates** when starting a new conversation with a customer. This is WhatsApp’s way of preventing spam.

When you need a template: - Sending the first message to a customer (they have not messaged you first) - Sending a broadcast to multiple customers - Sending a campaign message - Re-opening a conversation after 24 hours of inactivity

When you do NOT need a template: - Replying to a customer who messaged you first (within 24 hours) - Continuing an active conversation

Template Categories

WhatsApp organizes templates into categories:

Category	What It Is For	Example	Approval Speed
Marketing			24-48 hours

Category	What It Is For	Example	Approval Speed
Utility	Promotions, offers, announcements	"Flash sale! 20% off all items today!"	Usually faster
	Order updates, appointment reminders, receipts	"Your order #123 has been shipped"	
Authentication	Login codes, verification	"Your verification code is 1234"	Usually fastest

How to Request New Templates

1. Go to **Settings** → **Template Manager**
2. Click **" + Create Template"**
3. Fill in:

Field	What to Enter
Template Name	A short name (lowercase, underscores, no spaces) e.g., "flash_sale_announcement"
Category	Marketing, Utility, or Authentication
Language	English (or other supported languages)
Header	Optional: Text, Image, Video, or Document
Body	Your message text with variables like {{1}} for customer name
Footer	Optional: Small text at the bottom
Buttons	Optional: Call-to-action or quick reply buttons

1. Click **"Submit for Approval"**
2. WhatsApp reviews the template (usually 24-48 hours)
3. You will see the status change to:
 - **Approved** — Ready to use
 - **Rejected** — Needs changes (see rejection reason)
 - **Pending** — Still being reviewed

Template Approval Process

You create template → Submit to WhatsApp → WhatsApp reviews (24-48 hrs)

use!

resubmit

↓
Approved → Ready to

Rejected → Edit and

Pending → Wait

Tips for Getting Templates Approved

1. **Be clear and specific** — WhatsApp rejects vague templates. Say exactly what the message is about.
2. **Include opt-out option** — Add “Reply STOP to unsubscribe” at the end of marketing templates.
3. **Avoid ALL CAPS** — WhatsApp may reject templates with excessive capitalization.
4. **No misleading content** — Do not promise things you cannot deliver.
5. **Use variables correctly** — Use {{1}}, {{2}}, etc. for personalization. Tell WhatsApp what each variable represents.
6. **Keep it professional** — Avoid slang, excessive emojis, or aggressive sales language.
7. **Match the category** — Do not submit a promotional message as “Utility” — WhatsApp will reject it.
8. **Test with a sample** — Before submitting, read the template as if you were the customer. Does it make sense? Is it helpful?

Template Limits by Plan

Plan	Templates Allowed
Starter	5 templates
Professional	20 templates
Business	Unlimited

Appendix M: RFM Score Interpretation Guide

What Is RFM?

RFM stands for **R**ecency, **F**requency, and **M**onetary — three dimensions that measure how valuable a customer is to your business:

- **Recency (R)**: How recently did they last buy? (Score 1-5, where 5 = very recent)
- **Frequency (F)**: How often do they buy? (Score 1-5, where 5 = very often)
- **Monetary (M)**: How much do they spend? (Score 1-5, where 5 = high spender)

Score Breakdown Table

Recency Score:

Score	Meaning	Example
5	Purchased in the last 7 days	Bought yesterday
4	Purchased in the last 30 days	Bought 2 weeks ago
3	Purchased in the last 90 days	Bought last month
2	Purchased in the last 180 days	Bought 4 months ago
1	Purchased more than 180 days ago	Has not bought in 6+ months

Frequency Score:

Score	Meaning	Example
5	20+ purchases	Buys every week
4	10-19 purchases	Buys twice a month
3	5-9 purchases	Buys monthly
2	2-4 purchases	Buys occasionally
1	1 purchase	Bought only once

Monetary Score:

Score	Meaning	Example
5	Top 20% spender	Spends ₦100,000+ total
4	Top 40% spender	Spends ₦50,000-₦99,999 total
3	Middle spender	Spends ₦20,000-₦49,999 total

Score	Meaning	Example
2	Below average spender	Spends ₦5,000-₦19,999 total
1	Lowest spender	Spends less than ₦5,000 total

Combined Score (0-15)

The combined RFM score is the sum of all three scores:

Combined Score	Customer Segment	What It Means	Recommended Action
13-15	Champions	Best customers — buy often, spend a lot, bought recently	VIP treatment, exclusive offers, ask for referrals
10-12	Loyal Customers	Good customers — regular buyers with decent spending	Loyalty rewards, upsell premium products
8-9	Potential Loyalists	Recent customers who could become loyal	Nurture with follow-ups, offer loyalty program
6-7	New Customers	Just started buying, not yet established	Welcome sequence, great first experience
4-5	At Risk	Used to be good customers but slowing down	Win-back campaign, special re-engagement offer
2-3	Hibernating	Have not bought in a long time, low engagement	Strong win-back offer, “We miss you” campaign
1	Lost	Bought once long ago, never returned	Last-chance offer, then remove from active lists

Action Recommendations for Each Segment

Segment	Campaign to Use	Message Tone	Offer Level
Champions	VIP Exclusive, Referral Program	Grateful, exclusive	Early access, no discount needed
Loyal Customers	Loyalty Program, Birthday	Appreciative, rewarding	Moderate discounts, points multiplier
Potential Loyalists	Post-Purchase Follow-Up	Encouraging, helpful	Small incentive to return
New Customers	Post-Purchase Follow-Up	Welcoming, supportive	First-time buyer discount on next purchase
At Risk	Win-Back Dormant	Concerned, inviting	Meaningful discount (15-20%)
Hibernating	Win-Back Dormant	"We miss you", nostalgic	Strong discount (20-30%)
Lost	Win-Back (last attempt)	Direct, honest	Best offer you can give

Visual Guide

Think of your customers as a pyramid:

Your goal is to move customers UP the pyramid — from Lost to Hibernating, from Hibernating to At Risk, from At Risk to Loyal, and so on.

Appendix N: Keyboard Shortcuts & Tips

Keyboard Shortcuts

Shortcut	What It Does	Where It Works
Ctrl + K (or Cmd + K on Mac)	Open quick search	Anywhere in the CRM
Ctrl + N	New conversation	Inbox
Ctrl + Enter	Send message	Inbox (message composer)
Ctrl + Shift + E	Toggle emoji picker	Inbox (message composer)
Ctrl + /	Open keyboard shortcuts help	Anywhere
Ctrl + B	Bold selected text	Message composer
Ctrl + I	Italic selected text	Message composer
Ctrl + Shift + S	Strikethrough selected text	Message composer
Escape	Close current modal/popup	Anywhere
Tab	Move to next field	Forms
Shift + Tab	Move to previous field	Forms
↑ / ↓	Navigate through conversations	Inbox sidebar
Ctrl + 1	Go to Dashboard	Anywhere
Ctrl + 2	Go to Inbox	Anywhere
Ctrl + 3	Go to Contacts	Anywhere
Ctrl + 4	Go to Campaigns	Anywhere
Ctrl + 5	Go to Pipeline	Anywhere

Quick Actions from Dashboard

Action	How to Access
Send a quick broadcast	Click “Quick Broadcast” button on dashboard
View recent conversations	Click any conversation in the “Recent” widget
Check campaign performance	Click any campaign in the “Active Campaigns” widget

Action	How to Access
See today's tasks	Check the "Today's Tasks" widget
View revenue summary	Check the "Revenue" widget at the top

Power User Tips

- 1. **Use quick search (Ctrl+K) for everything** — Search contacts, conversations, campaigns, and settings from one place
- 2. **Pin important conversations** — Right-click a conversation and select "Pin" to keep it at the top of your inbox
- 3. **Use tags as filters** — Create specific tags and use them to quickly filter contacts for broadcasts
- 4. **Set up quick replies** — Create quick replies for your 10 most common responses to save time
- 5. **Use the mobile app** — Access the CRM from your phone for on-the-go customer management
- 6. **Schedule broadcasts the night before** — Set up tomorrow's broadcast before you leave work
- 7. **Review AI chatbot logs weekly** — Find new questions to add to your Knowledge Base
- 8. **Export reports monthly** — Keep a record of your CRM performance over time
- 9. **Use segments instead of manual filtering** — Save your common filters as segments for one-click access
- 10. **Check the "What's New" section** — We add new features regularly; stay updated!

Which Plan Is Right for You? (Decision Guide)

Answer these questions to find your ideal plan:

Question 1: How many customers do you have? - Less than 500 → Starter works - 500-2,000 → You need Professional - More than 2,000 → You need Business

Question 2: Do you have an online store (Shopify/WooCommerce)? - No → Starter is fine - Yes → You need Professional or Business

Question 3: Do you need the AI chatbot? - No → Starter is fine - Yes, basic → Professional - Yes, full → Business

Question 4: How many team members need access? - 1-2 → Starter - 3-5 → Professional - 6+ → Business

Question 5: Do you run Facebook/Instagram ads with Click-to-WhatsApp? - No → Starter or Professional - Yes → Professional (basic tracking) or Business (full analytics)

Annual vs Monthly Savings

Plan	Monthly	Annual (per month)	Annual (total)	You Save
Starter	₦50,000	₦40,000	₦480,000	₦120,000/year
Professional	₦120,000	₦96,000	₦1,152,000	₦288,000/year
Business	₦250,000	₦200,000	₦2,400,000	₦600,000/year

Pro Tip: If you are committed to using the CRM for your business (and you should be!), the annual plan saves you 20%. That is like getting more than 2 months free.

Appendix P: Nigerian Business Use Cases

Here are 5 detailed stories of how Nigerian businesses use the M4E Customer Reactivation Manager to grow their revenue.

Use Case 1: Mama Nkechi's Kitchen (Restaurant)

Business Profile: - **Type:** Nigerian restaurant and catering service - **Location:** Surulere, Lagos - **Staff:** 12 (3 use the CRM) - **Customers:** ~800 in database - **Plan:** Professional (₦120,000/month)

The Challenge: Mama Nkechi had been running her restaurant for 8 years. She had a loyal customer base, but noticed that many regulars had stopped coming. She kept customer phone numbers in an old exercise book and a phone contact list, but had no organized way to reach out to them. When she tried sending WhatsApp broadcasts manually, it took hours and she could only reach about 50 people at a time.

How She Uses the CRM:

1. **Contact Import:** Mama Nkechi imported 800 contacts from her phone and exercise book. The CRM automatically identified 280 as dormant (no order in 60+ days).
2. **Daily Specials Broadcast:** Every morning at 9 AM, she sends a broadcast with the day's specials to her "Regular Customers" tag (450 contacts). This takes 5 minutes to set up the night before.
3. **Win-Back Campaign:** She launched a win-back campaign targeting 280 dormant customers with a 15% discount. Result: 95 customers (34%) came back within 2 weeks, generating ₦712,500 in recovered revenue.
4. **Birthday Campaign:** She collected birthdays from 320 customers. The birthday campaign sends automatic wishes with a free dessert offer. Birthday customers spend 40% more than usual.
5. **AI Chatbot:** After hours (8 PM - 9 AM), the chatbot handles menu inquiries, takes pre-orders, and answers common questions. This captures 45+ overnight orders per month worth ₦135,000.
6. **Post-Purchase Follow-Up:** After every catering order above ₦20,000, the CRM automatically sends a thank-you message and asks for a Google review. Her Google rating went from 3.8 to 4.6 stars in 3 months.

Results After 6 Months:

Metric	Before CRM	After CRM	Change
Monthly revenue	₦2,800,000	₦4,200,000	+50%
Daily orders	25	45	+80%
Active customers	200	520	+160%
Google rating	3.8 stars	4.6 stars	+0.8
Time on marketing	3 hours/day	30 min/day	-83%

Mama Nkechi says: "Before, I was spending 3 hours every day sending WhatsApp messages one by one. Now the CRM does it for me while I focus on cooking. The win-back campaign alone paid for 6 months of the CRM subscription!"

Use Case 2: Bella's Boutique (Fashion Retail)

Business Profile: - **Type:** Women's fashion retail (physical store + Shopify online store) - **Locations:** Lagos (Lekki) and Abuja - **Staff:** 8 (4 use the CRM) - **Customers:** ~1,500 in database - **Plan:** Business (₦250,000/month)

The Challenge: Bella's Boutique had a growing online store on Shopify but was losing 70% of customers who added items to their cart without completing the purchase. She also had no way to track which customers visited which branch, and her sales team was responding to WhatsApp inquiries inconsistently.

How She Uses the CRM:

1. **E-Commerce Integration:** Connected Shopify to the CRM. Now every online customer is automatically added as a contact with their purchase history.
2. **Cart Abandonment Campaign:** The CRM detects abandoned carts and sends a 3-message recovery sequence. Recovery rate: 22%, generating ₦1,250,000/month in recovered sales.
3. **Branch Management:** Set up Lekki and Abuja as separate branches. Each branch has its own QR code, team members, and targeted campaigns.
4. **Product Catalog Browse:** Business plan feature lets customers browse the catalog inside WhatsApp. 40% of browsers make inquiries, and 25% of those convert to sales.
5. **New Product Launch Campaign:** For each new collection, Bella runs a 3-phase launch: Teaser (3 days before) → Launch announcement → Early bird offer. VIP customers get 24-hour early access.
6. **Team Management:** Bella (Owner) oversees everything. Amaka (Admin, Lagos) manages daily operations. Chisom and Ngozi (Agents) handle customer conversations.
7. **Pipeline:** Tracks custom orders (wedding outfits, corporate uniforms) through stages: Inquiry → Measurement → Design → Production → Fitting → Delivery → Paid.

Results After 6 Months:

Metric	Before CRM	After CRM	Change
Monthly online revenue	₦3,500,000	₦5,800,000	+66%
Cart recovery rate	0%	22%	New!

Metric	Before CRM	After CRM	Change
Customer response time	4 hours	15 minutes	-94%
Repeat purchase rate	18%	35%	+94%
New collection launch sales (first week)	₦800,000	₦2,100,000	+163% ★

Use Case 3: GlowUp Salon (Beauty & Wellness)

Business Profile: - **Type:** Hair salon and beauty spa - **Locations:** Lekki, Ikeja, and Abuja - **Staff:** 18 (7 use the CRM) - **Customers:** ~1,000 in database - **Plan:** Business (₦250,000/month)

The Challenge: GlowUp Salon was losing clients to competitors because they had no follow-up system. Clients would visit once or twice and then disappear. The salon had no way to remind clients about appointments, send birthday offers, or identify their most valuable clients. Each branch operated independently with no shared customer data.

How She Uses the CRM:

- 1. Multi-Branch Setup:** All 3 branches connected under one account. Each branch manager is an Admin with branch-level access.
- 2. QR Codes at Reception:** Each branch has a branded QR code. When clients scan it, they are automatically tagged with the branch name and added to the CRM.
- 3. Birthday Campaign:** With 320 birthdays collected, the salon sends automatic birthday messages with 25% off any treatment. Birthday clients spend 50% more than usual.
- 4. WhatsApp Flow Surveys:** Clients book appointments through an interactive WhatsApp form — selecting service type, preferred stylist, date, and time. 60% completion rate vs 20% for the old method (calling to book).
- 5. Loyalty Program Campaign:** Digital loyalty program replaces paper punch cards. Clients earn points for every visit and spend. Tiers: Bronze → Silver → Gold → Platinum with increasing rewards.
- 6. VIP Campaign:** Top 20% spenders get exclusive offers, early access to new services, and priority booking. VIP clients spend 35% more after receiving exclusive treatment.

7. **Sentiment Analysis:** The CRM detects unhappy clients from their messages. When negative sentiment is detected, the branch manager is immediately notified to intervene.

Results After 6 Months:

Metric	Before CRM	After CRM	Change
Monthly revenue (all branches)	₦5,200,000	₦7,800,000	+50%
Client retention rate	40%	68%	+70%
Appointment no-shows	25%	8%	-68%
Average client lifetime value	₦45,000	₦78,000	+73%
Cross-branch consistency score	55%	85%	+55%

Use Case 4: SwiftMove Logistics (Delivery & Logistics)

Business Profile: - **Type:** Delivery and logistics company - **Location:** Lagos (serving nationwide) - **Staff:** 25 (6 use the CRM) - **Customers:** ~600 business clients - **Plan:** Professional (₦120,000/month)

The Challenge: SwiftMove had a growing client base but was losing contracts because follow-ups were inconsistent. Sales quotes were tracked in spreadsheets, delivery complaints were handled ad-hoc, and there was no system to identify which clients were at risk of leaving. The sales team spent more time on admin than selling.

How She Uses the CRM:

1. **Sales Pipeline:** Created a “Delivery Contracts” pipeline with stages: Inquiry → Quote Sent → Negotiation → Won → Lost. Every new inquiry becomes a deal. The pipeline shows ₦5.15M in potential revenue at any time.
2. **Automations:** Set up 8 automations including:
 - Auto-send quote follow-up after 3 days of no response
 - Auto-tag clients by service type (same-day, next-day, interstate)
 - Auto-notify manager when a deal is stuck for 5+ days
 - Auto-send delivery confirmation when status changes

3. **Post-Purchase Follow-Up:** After every delivery, the CRM sends a satisfaction check. Happy clients get a referral request. Unhappy clients get escalated to the operations manager.
4. **Referral Program:** Happy clients receive a referral code. For every new client they refer, both parties get 10% off their next delivery. Result: 2.3 new clients per referrer.
5. **RFM Scoring:** Identifies which clients are at risk of churning. Clients with declining frequency scores get proactive outreach from the account manager.
6. **Feedback Collection:** Monthly satisfaction surveys sent via WhatsApp. 35% response rate. Feedback is used to improve service quality.

Results After 6 Months:

Metric	Before CRM	After CRM	Change
Monthly revenue	₦8,500,000	₦12,300,000	+45%
Quote-to-close rate	22%	38%	+73%
Client churn rate	15%/quarter	6%/quarter	-60%
Average deal size	₦180,000	₦245,000	+36%
Referral-generated clients	2/month	8/month	+300%

Use Case 5: TechHub Academy (Education & Training)

Business Profile: - **Type:** Technology training academy (coding, data science, digital marketing) - **Location:** Victoria Island, Lagos (with online courses) - **Staff:** 15 (5 use the CRM) - **Students:** ~400 in database - **Plan:** Professional (₦120,000/month)

The Challenge: TechHub Academy was running Facebook and Instagram ads to attract students, but the follow-up process was broken. Ad leads would message on WhatsApp, get a reply hours later, and by then they had enrolled elsewhere. The academy also had no system to track student satisfaction, collect testimonials, or encourage referrals.

How She Uses the CRM:

1. **Ad Lead Tracking:** Connected Facebook ads to the CRM. When someone clicks a Click-to-WhatsApp ad, they are automatically added as a contact with the tag "Ad Lead" and the specific course they inquired about.

2. **Ad Lead Nurturing:** Automated 5-message nurture sequence for ad leads:
 - Immediate: Welcome + course details
 - 1 hour: Student success stories
 - 24 hours: Free mini-lesson link
 - 3 days: Limited-time enrollment discount
 - 7 days: Last chance reminder
3. **Referral Program:** Current students get a unique referral code. For every friend who enrolls, the referrer gets ₦20,000 off their next course and the friend gets ₦10,000 off. Result: 35% of new enrollments come from referrals.
4. **Feedback Collection:** After each course module, students receive a satisfaction survey via WhatsApp. The satisfaction-gated system ensures only happy students are asked for Google reviews and testimonials.
5. **Post-Course Follow-Up:** 30 days after course completion, students receive a check-in message asking about their career progress. This builds long-term relationships and identifies upsell opportunities (advanced courses).
6. **Seasonal Promotions:** During school holidays (December, Easter, summer), TechHub runs enrollment campaigns with early-bird discounts. The CRM targets past inquirers who did not enroll.
7. **Pipeline:** Tracks enrollment process: Inquiry → Info Session → Application → Payment → Enrolled → Completed → Alumni.

Results After 6 Months:

Metric	Before CRM	After CRM	Change
Monthly enrollments	15	28	+87%
Ad lead conversion rate	8%	24%	+200%
Referral enrollments	3/month	10/month	+233%
Google reviews	12 total	67 total	+458%
Student satisfaction score	Unknown	4.5/5	New!
Cost per enrollment	₦45,000	₦18,000	-60%

TechHub's founder says: "The CRM transformed our enrollment process. Before, we were losing 90% of our ad leads because we could not follow up fast enough. Now the CRM follows up instantly, and our conversion rate tripled. The referral program alone generates 10 new students every month — that is ₦3.5 million in revenue from happy students telling their friends."

Document History

Version	Date	Changes
v1.0	January 2026	Initial release — 15 sections covering basic CRM features, contact management, messaging, and 10 appendices
